Abstract

Throughout This study, the researcher aimed to identify the reality of the practical application of sustainability theories in the work of ADANOC where the researcher adopted the descriptive analytical method to reach the results, in the first chapter, he had reviewed seven theories looking at sustainability with the analysis of each theory and its criticism and the extent to which these theories relate to methods of governance Applied at ADANOC. What is difficult in this study, is how to reconcile economic development with sustainability and governance by highlighting aspects of sustainability of economic growth by demonstrating other aspects of this growth, such as social aspects and related local sustainable development frameworks and the resulting methods of sustainable development. The second chapter examines the theoretical framework of the study in terms of governance and its role in the application of sustainability and sustainable development strategies and the difference between economic growth and economic development. In the third chapter, he explains about the Experience of Abu Dhabi National Petroleum Company in terms of its establishment, mission and products as well as its relations with the markets, and who are the partners involved in its management of employees and the role of suppliers, contractors and partners, and its cooperation with local and federal governments and its role in communities local scientific and academic research and training centers. In chapter four, two sustainability theories were selected: the theory of economic growth and the accumulated circular development theory, which examined the extent to which they conformed to the ADANOC mechanism of action. This study presents a fundamental problem that revolves around the reasons for the difficulty of reconciling economic development and sustainability, why there is a gap and a lack of linking development policies with environmental and social policies by states, and why have there been opinions to stop development and what it has to do with environmental damage and social justice? In the analysis chapter, a detailed explanation was given about the theories pursued by ADANOC to achieve its goals, and then the main elements focused on achieving sustainable development and governance were selected and therefore ADANOC's strategies were sought and compared with the elements of governance and achieving sustainable development, and was clarified. The researcher believes that there are many signs and reflections of the results obtained from this study and can reach them by explaining the projects implemented by ADANOC, by examining the progress of its work and measure its success, and also by looking at the reasons of its celebrations and honoring the experts and its administrators and technicians. At the end of this study, the researcher listed few recommendations for researchers and decision makers to try to introduce them to the theories of governance and economic sustainability and to look for the role of governance in corporate governance.

Keywords: Governance, sustainability, economy, development.
