Abstract

The spread of the Corona virus has clearly affected the work of public utilities in the country, disrupting some of them and modifying the way others work, as the spread of the pandemic has led to the creation of new methods and means that were not familiar in the functioning of public utilities. The most important of these means is education and remote litigation, which is done through modern means of communication, including the Internet. Since the health facility is one of the most vital public facilities, both the United Arab Emirates and Jordan have been keen to continue its work regularly and steadily during the pandemic, by taking many measures and procedures that have worked to continue its work. The researcher dealt with the subject of the health facility between the requirements of the public system and the principle of continuity of the public facility in exceptional circumstances "a comparative study" through two chapters preceded by an introductory study in which it dealt with the principle of continuity of the health facility and the requirements of the public system. The first chapter we dealt with, "the continuity of the public health facility (legal controls and protection mechanisms), Where we dealt with the legal controls for the continuity of the public health facility in normal circumstances as well as in exceptional circumstances, as well as the mechanism of legal protection for the continuity of the public health facility in exceptional circumstances through legislative control, as well as judicial control". As for the second chapter, we dealt with administrative control procedures and the continuity of the public health facility in the time of the Corona pandemic, where we dealt with "the public health facility between the principle of continuity and the requirements of the public health system in the time of Corona, This is by studying the problem of balancing the continuity of the public health facility and maintaining public order, as well as the repercussions of the Corona pandemic on the continuity of the public health facility, and we also dealt with administrative control procedures and their role in confronting the Corona pandemic, and We also dealt with administrative control procedures and their role in confronting the Corona pandemic, through administrative control procedures related to the continuity of public facilities", with a study of some models such as the continuity of the educational facility through the distance education mechanism, and the continuity of the judicial facility through the remote litigation mechanism, as well as administrative control procedures related to the continuity of the public health facility. The researcher ended her study with a conclusion and many results and recommendations. The researcher relied in her study on the descriptive analytical approach, where the researcher described and analyzed the legal texts that relate to the subject of the study, in addition to the comparative approach by making a comparison between the UAE law and the laws of other countries.

Key words: public facility, health facility, corona pandemic, epidemic, remote work
