College of Business and Economics

Department of Accounting

Master of Professional Accounting

Description

The MPA is the first AACSB-Accredited Accounting program in the GCC and MENA region. It caters to practicing accountants and managers who have chosen the professional path, and who would like to further their education with a post-graduate degree in accounting. The program covers much wider areas of accounting than any of the other professional accounting certifications that tend to be narrowly specialized. In addition, it develops personal and business competencies (technical and non-technical) of graduates and provides them with an excellent foundation for successful professional careers. The degree will also be a natural route to a Doctorate of Business Administration (DBA).

Program Objectives

1. Communicate effectively in a professional context.
2. Think critically in relation to the analysis and solution of advanced accounting problems.
3. Work individually as well as contribute positively to the functioning of teams as members and leaders.
4. Ethically and socially responsible when making accounting-related decisions.
5. Demonstrate advanced specialized knowledge in accounting and cognate fields when appropriate.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Demonstrate a highly developed professional oral presentation of information, criticizing substantively complex matters in accounting accompanied by appropriate technology.
2. Demonstrate abilities to communicate effectively in writing, using information technology to the production of highly developed professional written materials on substantively complex matters in accounting.
3. Apply advanced technologies and techniques (qualitative/quantitative) to the collection and analysis of financial and non-financial information and deriving appropriate decisions in various accounting fields.
4. Critically interpret information, through accurate identification of accounting complex problems, and suggestion of accounting-based innovative solutions.
5. Demonstrate autonomy, responsibility, and creativity in planning and executing major projects in their work.
6. Demonstrate ability to work in teams, showing leadership and direction, appropriate to complex accounting environment settings.
7. Apply professional standards and codes of conduct at national and international levels.
8. Relate complex ethical issues consistently, reflecting social responsibility, and leading to informed, fair and valid accounting-related decisions.
9. Demonstrate a comprehensive advanced knowledge of key concepts across the breadth of accounting topics.
10. Assess contemporary issues in accounting through synthesizing knowledge from accounting and cognate fields when appropriate.

ACCT	505	Financial and Corporate Reporting	3
ACCT	510	Management and Cost Accounting	3
MGMT	510	Business Environment	3

Department of Management

Master of Business Administration

Description

The MBA experience at UAE University emphasizes leadership, innovation, and entrepreneurial creativity. During four semesters of courses, MBA students are guided through a progression of thoughts and shared experience that prepares them for confident, competent business leadership in and beyond the UAE business environment and provides the business community with high quality graduates who are capable of becoming the business leaders of the UAE and beyond.

Program Objectives

1. Advanced specialized knowledge and critical understanding in business administration and at the interface between related fields.
2. Highly developed communication skills, in a professional context, to explain and | or critique substantively complex matters.
3. Apply critical thinking skills to the analysis and solution of complex business problems.
4. Work effectively as individuals and contribute positively to complex groups as members and leaders.
5. Ethical and social commitment at the local and global levels.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Demonstrate an advanced comprehensive knowledge of conventional and innovative concepts and principles across the breadth of business administration issues.
2. Demonstrate the ability to professionally apply business administration knowledge in practical settings.
3. Communicate in writing, using the appropriate information technology where appropriate, and to produce highly developed professional quality business documents on substantively complex matters in business administration.
4. Deliver a highly developed professional quality presentation, expressing a comprehensive internalized personal worldview on substantively complex matters in business administration accompanied by appropriate technology.
5. Identify appropriate sources of information and use appropriate analytical techniques in a systematic way that leads to integrate knowledge from different business administration related fields and use highly developed cognitive skills to think critically and creatively.
6. Demonstrate advanced problem solving skills by identifying a business complex problem, generating and comparing alternative strategic approaches to develop innovative solutions with intellectual independence.
7. Demonstrate autonomy, responsibility and continuous self-development in planning and executing a major project at their work places.
8. Demonstrate teamwork, coordination, and leadership abilities in a complex strategic business environment setting involving multiple groups and governance processes
9. Lead, contribute and implement ethical standards in a consistent and sensitive way that leads to informed, fair and valid decisions.
10. Analyze business administration issues, reflect ethical engagement, civic and social responsibility on socio cultural norms and relationships, and act to transform them.

Doctor of Business Administration

Description

The DBA is a four-year blended part-time program and is structured in two stages. Stage One consists of two years of course work that covers research philosophies, qualitative and quantitative research methods, research in support of business functions, literature review & critique, and human factors and social responsibility. Stage Two lasts two years and comprises the DBA thesis. At this stage the formal teaching aspect of the program ends and students are expected to use the knowledge gained from Stage One to undertake a research investigation that represents an original contribution to professional thinking and practice and has high academic merit. DBA candidates often tackle issues of real importance to their own organizations, thus delivering high-utility outcomes and enjoying the rewards of seeing their solutions beneficially implemented. During this period, the student's work will be overseen by a Thesis Committee. The program is completed after successful submission and defense of the dissertation.

Program Objectives

1. Enabling senior managers to enhance their professional practice and contribute state-of-the-art knowledge in their chosen area of study.
2. Producing research oriented professionals with advanced capabilities in leadership and change management.
3. Allowing graduates to take back to their organizations increased understanding and conceptual thinking in business management at the highest level.
4. Enhancing competitive advantage for the executives and their organizations, by participating in discussions with academics and practitioners at the cutting edge of their fields.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Develop oral presentations to communicate effectively and without guidance, using technologies to support the oral presentation of information where needed to academic and professional peers.
2. Write effectively to communicate highly complex and diverse matters to expert audiences.
3. Apply a range of mastered skills and techniques including synthesis, evaluation, planning and reflection, required to critically extend and redefine professional practice and knowledge.
4. Apply advanced skills in developing innovative solutions to critical problems using expert skills, demonstrating intellectual independence.
5. Act with authority, creativity, autonomy, independence, scholarly and professional integrity.
6. Demonstrate abilities associated with professional leadership of peer groups and teams.
7. Assess consistently and sensitively manage diverse ethical issues in highly complex contexts and make fair judgments.
8. Examine the complex social and cultural contexts of leadership.
9. Evaluate the state of research and practice in a business field and highlight possible ways to contribute to that field.
10. Create new knowledge in the field, through independent research, innovative and creative practical solutions to a challenging business problem through conceptualizing, designing, implementing, and adapting research processes in complex contexts.

Master in Business Analytics

Description

The post-graduate program in Business Analytics at UAEU introduces the various information technologies, as well as analytical models and methods, for transforming business data into information, knowledge, and subsequently digital assets. The program provides the fundamental background, as well as advanced applications of statistics, visual analytics, machine learning, data analytics, optimization, and other analytical techniques. Three distinctive features of the program are: the emphasis on real-world applications in diverse functional areas of business; the enrichment of lecture materials through practical experience with state-of-the-art software tools; and the flexible program structure which allows for conducting a capstone project based on a data-driven real world problem coming from a client company.

Each course is delivered in an intensive mode during an eight weeks term through 9 sessions of 5 hours each. The Fall and Spring semesters consist of two eight weeks terms each. Two courses are offered each term.

Program Objectives

1. Knowledge and skills in analytical modeling and problem solving.
2. Critical thinking, research, and analytical skills to gather data and information and solve problems involving big and/or complex data.
3. Effective work and communication skills, including the ability to work efficiently and effectively in teams.
4. Skills to execute ethical standards and comply with laws in organizations, at local and global levels.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Appraise various information technologies, as well as analytical models and methods, through advanced and specialized knowledge, for transforming data into information, knowledge, and subsequently digital assets.
2. Select descriptive, diagnostic, predictive, and prescriptive analytical models, methods, and tools, based on problem context, business objectives, and data sources.
3. Apply analytical methods, including statistics, data analytics, and optimization, for advanced analysis of data-driven problems in business and industry.
4. Develop innovative research-driven solutions for discovering actionable insights, driving sustainable decisions, and developing novel business models.
5. Communicate effectively to specialized and non-specialized audiences, verbally, visually, and in writing, the results and interpretation of data-centric analyses of business and industry problems.
6. Execute business analytics activities and projects with autonomy, entrepreneurship, and leadership.
7. Conduct business analytics activities and projects as an effective and collaborative team member.
8. Implement the principles of privacy, ethics and governance in business analytics, while reflecting on socio-cultural norms.

College of Education

Department of Curriculum & Instruction

Master of Education

Description

The Master of Education Program at the United Arab Emirates University is practice oriented with the primary focus of enhancing the knowledge, skills, and dispositions of graduate students. The program is designed to cater for the needs of school teachers, principals, and other school professionals who are eager to pursue graduate studies to improve their performances. It focuses on preparing leaders who will engage in school reform through curriculum development, school decision-making, and community outreach. The program is based on best international standards which will help in facilitating the continuous improvement of education in the United Arab Emirates. The Master's degree program offers three tracks: Educational Leadership, Special Education and Curriculum and Instruction (English, Arabic, Islamic Studies, Mathematics, Science and Social Studies). UAEU College of Education is considered a pioneer in the Middle East in Teacher Education preparation, demonstrated by its attainment of international recognition from the Center for Quality Assurance in International Education (CQAIE) in collaboration with the National Council for Accreditation of Teacher Education (NCATE), in 2005 and 2010 respectively.

Program Objectives

1. Acquire advanced knowledge of educational theory, research, and skills related to the area of specialization.
2. Enhance ability to incorporate theory and research into practice related to the area of specialization.
3. Become reflective practitioners within the area of specialization.
4. Become an educational leader and promotes the success of all students by advocating, nurturing, and sustaining a school culture and instructional program conducive to student learning.
5. Enhance ability to use problem solving skills and critical thinking abilities to develop, implement, and evaluate collaborative teaching and learning activities.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Apply advanced knowledge and skills necessary in their area of specialization.
2. Create a responsive learning environment in which equal treatment, fairness, and respect for diversity are sustained.
3. Collaborate with stakeholders to improve programs, services, and outcomes for students and their families.
4. Use quantitative and qualitative research that enhance teaching and learning practices and/or school operations.
5. Demonstrate leadership abilities in their profession.
6. Integrate ICT (Information and Communication Technology) into teaching and learning and/or school operations.
7. Use effective communication skills to manage the complexities of teaching for learning in all educational settings.

Master of Educational Innovation

Description

The Master of Educational Innovation program aims to prepare teachers and leaders to be innovative in their teaching and school leadership practices. The program does not only focus on helping students acquire new knowledge in teaching and school leadership, but also on enhancing learners' skills through teamwork, collaborative learning, and linking theory to practice. In addition, the program provides learners with new frameworks and thinking patterns that cherish innovation and acceptance of change to keep pace with developments in education. Finally, the program allows students to focus on scientific research skills and use them to solve issues and problems that they might face in their workplaces in new and innovative ways. Arabic is the main language of instruction in this program. The Master of Educational Innovation Program comes as a result of collaboration between the UAE University represented by the College of Education and the Hamdan Bin Rashid Al Maktoum Foundation for outstanding educational performance. The Foundation fully sponsors a minimum of 10 students annually to join this program. A noteworthy point is that this program is also open to applicants from outside the Foundation. The Master of Educational Innovation offers two concentrations of study: Innovation in School Leadership and Innovation in Teaching. The program is a 30 credit hour program where students study 10 courses over the period of around 18 months. The total fees of the program, excluding the 200AED application fees, is 72000AED, and for the course is 7200AED. The Master of Educational Innovation program is delivered in a face-to-face format with classes held on Wednesday or Thursday afternoon (from around 4:00 – 7:00 pm) and on Saturdays all day (from 9:00 am – 4:00 pm). The program is offered at Hamdan bin Rashid Al Maktoum Center for Giftedness and Innovation, Al Beda'a, Dubai.

Program Objectives

1. Support distinguished teachers and educational leaders across the United Arab Emirates.
2. Develop teachers and educational leaders' skills and abilities.
3. Supply the educational field with outstanding national force that can contribute to the prosperity and development of the society.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Establish a national network of best practice related to innovation
2. Critique innovational educational theories and practices.
3. Design innovational learning programs to meet diverse learners' needs.
4. Create innovative projects to improve school performance.
5. Conduct innovative research projects to improve educational practices.

Doctor of Philosophy in Mathematics Education

Description

The proposed PhD program in Mathematics Education prepares students to address key research issues related to Mathematics education in the UAE. Students in the program will acquire expertise

in applying and evaluating appropriate research methodologies to inform recent developments in the field of Mathematics education.

Program Objectives

1. Offer a rigorous and innovative discipline-based knowledge that prepares students to succeed in a globally challenging, competitive and changing environment.
2. Develop graduates' scholarly inquiry grounded in research and the reality of practice in education.
3. Enhance graduates' professional growth, lifelong learning skills and leadership competencies in the area of specialization for career opportunities in educational sectors.
4. Provide opportunities for graduates to adhere to professional integrity and research ethics, and be committed to values related to the area of specialization.
5. Prepare graduates to be inquisitive, to reason critically, and to communicate clearly and effectively.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Analyze educational issues and topics of interest in the field of Mathematics Education.
2. Create an original research in Mathematics Education that adds to human knowledge.
3. Assess issues, decisions, or practices in Mathematics Education applying relevant research methodology to finding a possible solution.
4. Explain the major tenets of Mathematics Education orally, and in writing, to different audience.
5. Devise strategies or actions that resolve ethical issues in Mathematics Education.
6. Apply research skills in Mathematics Education to other work environments and career opportunities inside and outside academia.

Doctor of Philosophy in Leadership and Policy Studies in Education

Description

The proposed PhD program in Leadership and Policy Studies in Education prepares students to address key research issues facing educational leadership in the UAE. Students in the program will acquire expertise in applying and evaluating appropriate research methodologies to recent developments in the field of education relevant to leadership and policy issues.

Program Objectives

1. Offer a rigorous and innovative discipline-based knowledge that prepares students to succeed in a globally challenging, competitive and changing environment.
2. Develop graduates' scholarly inquiry grounded in research and the reality of practice in education.
3. Enhance graduates' professional growth, lifelong learning skills and leadership competencies in the area of specialization for career opportunities in educational sectors.
4. Provide opportunities for graduates to adhere to professional integrity and research ethics, and be committed to values related to the area of specialization.
5. Prepare graduates to be inquisitive, to reason critically, and to communicate clearly and effectively.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Analyze educational issues and topics of interest in the field of Leadership and Policy Studies in Education.
2. Create an original research in Leadership and Policy Studies in Education that adds to human knowledge.
3. Assess issues, decisions, or practices in Leadership and Policy Studies in Education applying relevant research methodology to finding a possible solution.
4. Explain the major tenets of Leadership and Policy Studies in Education orally, and in writing, to different audience.
5. Devise strategies or actions that resolve ethical issues in Leadership and Policy Studies in Education.
6. Apply research skills in Leadership and Policy Studies in Education to other work environments and career opportunities inside and outside academia.

Degree Requirements: Total Credit Hours: 60

Doctor of Philosophy in Special Education

Description

The proposed PhD program in Special Education prepares students to address key research issues facing the field of special education in the UAE. Students in the program will acquire expertise in applying and evaluating appropriate research methodologies to inform recent developments in the field of special education.

Program Objectives

1. Offer a rigorous and innovative discipline-based knowledge that prepares students to succeed in a globally challenging, competitive and changing environment.
2. Develop graduates' scholarly inquiry grounded in research and the reality of practice in education.
3. Enhance graduates' professional growth, lifelong learning skills and leadership competencies in the area of specialization for career opportunities in educational sectors.
4. Provide opportunities for graduates to adhere to professional integrity and research ethics, and be committed to values related to the area of specialization.
5. Prepare graduates to be inquisitive, to reason critically, and to communicate clearly and effectively.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Analyze educational issues and topics of interest in the field of Special Education.
2. Create an original research in Special Education that adds to human knowledge.
3. Assess issues, decisions, or practices in Special Education applying relevant research methodology to finding a possible solution.
4. Explain the major tenets of Special Education orally, and in writing, to different audience.
5. Devise strategies or actions that resolve ethical issues in Special Education.
6. Apply research skills in Special Education to other work environments and career opportunities inside and outside academia.

Dual Master of Education Program with the Education University of Hong Kong

Description

With internationalization as the worldwide trend for further development of tertiary education, global engagement opportunities have been brought to postgraduate students through a variety of channels. Making reference to the collaboration model, a dual degree is now proposed to students in College of Education's (CEDU) MEd program - The Dual Master of Education Degree Program with Education University of Hong Kong. It is expected that the dual degree arrangement between EdUHK and UAEU will effectively pool the expertise of two universities together and add value to the existing MEd program. Moreover, this provides opportunities for students to be exposed to different intellectual and cultural environments, and will have the opportunity to be under a joint supervision team comprising of academics from both universities.

Admission Requirements

- For the admission requirements, current students in the EdUHK MEd program who have chosen the research project option and have satisfied all the requirements set by the partner university are eligible. The partner university will make the final decision on the acceptance of each student after review of all relevant documents.
- The arrangement will be the same for UAEU MEd students enrolling in the EdUHK MEd program.

Enrollment and Fees

MEd students of EdUHK who are interested in enrolling in the dual MEd degree program with UAEU have to submit a formal application for the program. Upon acceptance of the dual master's degree program, they will then need to prepare for the research proposal.

The student will have to pay the appropriate tuition fees and miscellaneous student fees to the "own" university only. Neither university will be expected to pay the other university for the collaboration.

Research and Thesis

Students are provided an opportunity to choose whether to complete a thesis or research project to offer a measure of flexibility to different types of students who are interested in the program. It is to be noted though that regardless of whether they choose the thesis or research project option, the students are expected to be the first author of at least one journal article submitted to a journal recognised by both universities.

Supervision

The joint supervision team will comprise academics from both universities, with a proper balance of members belonging to the two universities. There will be two co-principal supervisors, one from EdUHK and the other from UAEU. A combination of strategies of in-person and virtual/remote communication will be used. The students and teaching teams from both universities may be invited to spend brief periods at partner institutions. Teaching staff will have opportunities to engage in exchange activities of teaching, research collaboration and training and these events will also allow in person access of supervisors.

To enhance the opportunities for postgraduate students to access resources and expertise at the partner university, students will work under the supervision of academic staff from both universities once they pass their research proposal presentation and enter the research inquiry stage. There will be two co-principal supervisors, one from EdUHK and the other from UAEU. A combination of

strategies of in-person and virtual/remote communication will be used. The arrangements can facilitate staff interactions between EdUHK and UAEU while enhancing students' acquisition of research and transferable skills together.

Principal supervisors from both universities will be responsible for the nomination of the Research Project / Thesis Examiners. Details will be specified in the agreement for each candidate. Normally, principal supervisors of the joint supervision team will have to attend the Examination in person as observers.

The individual cooperation agreement based on the sample agreement has to be made between EdUHK and UAEU for each successful applicant for this dual MEd degree program. More specific details on the co-supervision arrangement will be included in the agreement.

Methods of Learning and Teaching

Students in this collaborative program will have to take a certain number of taught courses in their home institution as required by courses. The methods of learning and teaching will follow the existing practice of EdUHK and UAEU respectively.

Apart from taking courses at their home institution, students will have to take taught courses at the partner institution. The courses will not only help students to develop their subject-specific knowledge and transferable soft skills, but also widen their global perspectives by exposing themselves to a different learning environment. Moreover, through spending a brief period at partner institution, students will have opportunities to access the academic facilities, latest research tools, technologies, and resources of the partner institution and meet with postgraduate students and academics of different cultural backgrounds.

Assessment and Graduation Requirements

- The student has to enroll at both EdUHK and UAEU, under the supervision of a joint supervision team, in which there is a principal supervisor from each university (i.e., there will be co-principal supervisors). Both universities will sign an agreement for each candidate, which outlines the research and enrolment arrangements.
- The student has to complete all taught courses required by both universities.
- Research work for the thesis has to be carried out in both universities but what parts of the research are to be done in which institution can be worked out between the student and the two supervisors. Each participating student's exact period of stay is to be agreed by both institutions (normally no less than 4 months at each of the two universities; with discretion in special cases allowed). The participating students also have to satisfy other residential requirements of the two universities separately.
- A single Research Project / Thesis has to be submitted to both universities. An oral defence/viva examination will be organised as one and the only session held at and arranged by either EdUHK or UAEU as specified in the agreement for the candidate. The examination should be held in accordance with the regulations of UAEU and the EdUHK's General Academic Regulations for Taught Postgraduate Programs and Master of Education Program Research Project Guideline.
- For the purpose of finally assessing the Research Project / Thesis, expert committee will be appointed based on equal representation of both universities as specified in the agreement for the candidate. Principal supervisors from both universities are expected to attend the oral examination in person as observers.
- In addition to the Thesis, at least one article, from the research project, must have been submitted to a journal recognised by the Research and Development Office of EdUHK.

Master Degree

Two certificates (a MEd degree awarded by EdUHK and a MEd degree awarded by UAEU) will be awarded to students when they satisfy the following requirements:

- satisfy the course and credit requirements set out by EdUHK and UAEU
- pass Research Project / Thesis examination
- be the first author of at least one journal article submitted to a journal recognised by both universities.

Career Opportunities

Upon completion of this collaborative program, students will be able to achieve the intended learning outcomes of both the EdUHK and the UAEU MEd programs. In addition, the learning experience in this collaborative program will contribute to our MEd students' development and enhance their competitive edge. Participating in the program will extend their network through contact with academics and professionals at postgraduate level and thus effectively enhance their employability.

Program Aims and Objectives

Upon completion of this collaborative program, students will be able to achieve the intended learning outcomes of both the EdUHK and the UAEU MEd programs. In addition, the learning experience in this collaborative program will contribute to our MEd students' development and enhance their competitive edge by:

- Conduct research using the latest research tools, technologies, and resources of both institutions.
- Develop their network through contact with academics and professionals at postgraduate level to enhance their employability.
- Develop subject-specific knowledge and transferable soft skills.
- Cultivate their cultural consciousness and improving their ability to effectively engage in cross-cultural communication.

Degree Requirements

(The required coursework is based entirely on the courses offered in the Master program in Education at UAEU)

Program Objectives

1. Acquire advanced knowledge of educational theory, research, and skills related to the area of specialization.
2. Enhance ability to incorporate theory and research into practice related to the area of specialization.
3. Become a reflective practitioner within the area of specialization.
4. Become an educational leader and promotes the success of students by advocating, nurturing, and sustaining a school culture and instructional program conducive to student learning.
5. Enhance ability to use problem solving skills and critical thinking abilities to develop, implement, and evaluate collaborative teaching and learning activities.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Apply advanced knowledge and skills necessary in their area of specialization.
2. Create a responsive learning environment in which equal treatment, fairness, and respect for diversity are sustained.
3. Collaborate with stakeholders to improve programs, services, and outcomes for students and their families.
4. Use quantitative and qualitative research methods that enhance teaching and learning practices and/or school operations.
5. Demonstrate leadership abilities in the profession.
6. Integrate ICT (Information and Communication Technology) into teaching and learning and/or school operations.
7. Use effective communication skills to manage the complexities of teaching for learning in diverse educational settings.

College of Engineering

Department of Architectural Engineering

Master of Science in Architectural Engineering

Description

The Architectural Engineering Department offers a Master of Science (MSc) degree in Architectural Engineering for students with interests in the design, construction and operation of high performing built environment. The MSc degree prepares students for specialized roles in professional practice as well as for advanced study at the doctoral level. The program includes rigorous architecture engineering course work on topics related to building science, engineering systems, sustainable development and high-performance design at various scales of the built environment. The program culminates in either a research-based project or a thesis. Applicants are expected to have undergraduate architectural or architectural engineering backgrounds, either with a BSc degree in Architectural Engineering from UAE University or equivalent in a closely related area.

Program Objectives

1. Develop meaningful research on interactions between buildings and the surrounding environment at the local, national, and regional levels.
2. Provide research and professional training necessary for graduates to advance and move into higher professional or academic functions.
3. Maintain high international academic standards in research and professional students' learning outcomes.
4. Promote the collaboration between the Architectural Engineering research and graduate studies and the government and industrial sectors nationally and internationally.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Apply advanced research techniques and methods to the analysis and solution of engineering problems.
2. Demonstrate advanced knowledge sufficient to analyze complex environmental issues related to building and urban systems.
3. Develop comprehensive engineering systems, highly specialized components, or appropriate processes for built environment.
4. Apply advanced knowledge in a specialized and emerging area in high performance built environment.
5. Develop communication skills to present, explain and criticize highly complex issues.
6. Evaluate engineering systems in high performance built environment according to relevant regulations and codes.
7. Evaluate knowledge of contemporary professional practice in high performance built environment.

Doctor of Philosophy in Architectural Engineering

Description

The Doctor of Philosophy in Architectural Engineering (PhD in Architectural Engineering) provides students with a unique opportunity to demonstrate innovation in a wide range of architectural engineering research areas. The PhD in Architectural Engineering degree is awarded to candidates who successfully complete a program of advanced courses, qualification and research requirements and dissertation defense. Students are expected to carry out an independent investigation in an architectural engineering research area under supervision of experienced researchers. Graduates of the program are anticipated to meet the challenges in the architectural engineering discipline and provide innovative solutions based on the most recent developments in architectural engineering.

Program Objectives

1. Offer a rigorous and innovative engineering education that promotes innovative research in engineering areas related to national priorities
2. Prepare graduates to be inquisitive, to reason critically, and to lead nationally and globally
3. Contribute to the advancement of the UAE knowledge-based economy and quality of life through community engagement, knowledge transfer, and industry partnership

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Identify gaps in the current state of knowledge and outline directions to produce new knowledge at the frontier of the architectural engineering discipline.
2. Apply advanced theories and research methodologies to critically analyze open research problems in architectural engineering and develop innovative solutions.
3. Produce and defend an original research work that advances the state of the art in the architectural engineering discipline.
4. Communicate research findings, orally and in writing, at a high level of proficiency to faculty, peers, and the lay public.
5. Evaluate and manage complex professional engineering activities and diverse ethical issues within the work context.

Master of Science in Chemical Engineering

Description

The goal of this program is to graduate master-level chemical engineers who are highly qualified for a rewarding professional experience. Graduates may choose to work in the chemical, petrochemical or biochemical industries, continue on to other graduate level degrees, or join consulting/contracting companies. Prospective students have to be motivated to seek life-long learning and professional development and be capable of becoming professionals and leaders in the global chemical, petrochemical and biochemical industries.(Total credit hours is 30 for theses and 33 for no-theses).

Program Objectives

1. To generate graduates with high levels of competence in fundamental and applied concepts of chemical engineering.
2. To provide opportunities to address industrially important problems and to propose and investigate possible solutions
3. To provide an environment in which students can embrace social and personal development.
4. To motivate the students to seek life-long learning and professional development
5. To enhance students recognition and understanding of the professional and societal responsibilities associated with working in the industry.
6. To develop computational techniques, and written and oral communication skills.
7. To cultivate innovation and entrepreneurship through deeper understanding and advanced knowledge of the Chemical Engineering principles and operations.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Apply advanced concepts of fundamental sciences and engineering to solve complex Chemical Engineering problems.
2. Demonstrate the ability to work effectively both independently and in teams of various backgrounds.
3. Apply innovative and practical solutions to existing or novel processes in research.
4. Search, evaluate and acquire information from relevant chemical engineering literature.
5. Design advanced approaches to conduct chemical engineering experiments.
6. Use advanced quantitative and qualitative methods to interpret research experimental results.
7. Disseminate and discuss their professional and scientific work to the general public, as well as to experts in both writing and oral formats.
8. Observe and apply ethical and professional codes and responsibilities.

Master of Science in Petroleum Engineering

Description

The goal of this program is to graduate master-level petroleum engineers who are highly qualified for a rewarding professional experience. Graduates may choose to work in the petroleum industry, continue on to other graduate level degrees, or join consulting/contracting companies. Prospective students have to be motivated to seek life-long learning and professional development and be capable of becoming professionals and leaders in the global petroleum industries. (Total credit hours is 30 for theses and 33 for no-theses).

Program Objectives

1. To generate graduates with high levels of competence in fundamental and applied concepts of petroleum engineering.
2. To provide opportunities to address industrially important problems and to propose and investigate possible solutions.
3. To provide an environment in which students can embrace social and personal development.
4. To motivate the students to seek life-long learning and professional development
5. To enhance students recognition and understanding of the professional and societal responsibilities associated with working in the industry.
6. To develop computational techniques, and written and oral communication skills.
7. To cultivate innovation and entrepreneurship through deeper understanding and advanced knowledge of the Petroleum Engineering principles and operations.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Apply advanced concepts of fundamental sciences and engineering to solve complex Petroleum Engineering problems.
2. Demonstrate the ability to work effectively both independently and in teams of various backgrounds.
3. Apply innovative and practical solutions to existing or novel processes in research.
4. Search, evaluate and acquire information from relevant petroleum engineering literature.
5. Design advanced approaches to conduct petroleum engineering experiments.

1. Offer a rigorous and innovative engineering education that promotes innovative research in engineering areas related to national priorities.
2. Prepare graduates to be inquisitive, to reason critically, and to lead nationally and globally.
3. Contribute to the advancement of the UAE knowledge-based economy and quality of life through community engagement, knowledge transfer, and industry partnership.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Identify gaps in the current state of knowledge and outline directions to produce new knowledge at the frontier of the chemical engineering discipline.
2. Apply advanced theories and research methodologies to critically analyze open research problems in chemical engineering and develop innovative solutions.
3. Produce and defend an original research work that advances the state of the art in the chemical engineering discipline.
4. Communicate research findings, orally and in writing, at a high level of proficiency to faculty, peers, and the lay public.
5. Evaluate and manage complex professional engineering activities and diverse ethical issues within the work context.

Dual Award PhD Program in Chemical Engineering with Katholieke Universiteit (KU) Leuven

Description

The dual PhD degree in Chemical Engineering is offered collaboratively by UAEU and Katholieke Universiteit Leuven (KU Leuven) that leads to the award of a dual degree with two separate certificates, one from each institution. This program allows a student to receive academic training and to perform research work under the joint responsibility of a supervisor from UAEU and a supervisor from KU Leuven. The Doctoral student is required to satisfy the admission requirements of both institutions, comply with both institutions' academic regulations, and defend a single dissertation that meets the requirements of both institutions. For each student in the Dual PhD Program, an individualized agreement specifying the details of the student's course of study, academic requirements, and plan for the completion of the Dual Degree will be negotiated and signed.

This program provides students with a unique opportunity to demonstrate innovation in a wide range of Chemical Engineering research areas. The dual PhD degree in Chemical Engineering is awarded to candidates who successfully complete a program of advanced courses, qualification and research requirements and dissertation defense. Students are expected to carry out an independent investigation in a Chemical Engineering research area under supervision of experienced researchers. Graduates of the program are anticipated to meet the challenges in the Chemical Engineering discipline and provide innovative solutions based on the most recent developments in Chemical Engineering.

The total duration of the doctoral studies in the dual degree program normally takes between 4-7 years. Shorter or longer periods can be agreed by the two institutions as long as all the requirements are met within this period. The student is required to spend a minimum of six months (preferably longer time) at each of the partner institutions.

Upon successful completion, the candidate will receive two separate certificates, one from each of the two institutions, indicating that the program in which the student was enrolled is a dual degree program.

The principle of "main-partner" institution will be applied for this Program. Typically, the institution where the PhD student starts or where he/she will spend most of his/her time, will be indicated as the main institution. The other institution will be considered as the partner institution.

Benefits of the Program

This program enhances the academic training and research experience of Doctoral candidates. Students will have access to the facilities, resources, professors and research environments of the two institutions, giving the doctoral candidate the full benefits of international experience. Dual supervision allows complementary approaches to research questions. Students will also gain knowledge and experience from research groups at both institutions, learn to be mobile, be willing to mediate between two supervisors who may have different institutional priorities, be able to adapt to the culturally-different approaches to research, and be able to fulfill the demands of two administrative systems. In addition, the program provides students with excellent networking opportunities, which can result in more promising future job prospects.

Eligibility

Privilege to participate in the Dual PhD Program is only extended to students who have demonstrated a record of excellence and who can demonstrate that they will be able to successfully complete the requirements of the two institutions within the maximum time period allowed by each

institution. Candidates should have previous research experience, which is evident from their publication records in the area. Highly qualified students who are interested in the Dual PhD Program should begin by discussing this option with their supervisor and a prospective supervisor at the partner institution, who is preferably engaged in an active collaboration between two partner institutions. Normally, students should have completed one year in the Doctoral program at the main institution before applying to the Dual PhD Program. Alternatively, the two supervisors from the partner institutions may recruit an excellent student for the Program. After receiving confirmation from the potential supervisors at both institutions about their willingness to jointly supervise the candidate, the student needs to apply to the appropriate authorities at the two institutions. The applicant needs to follow the standard admission procedures and deadlines and meet the academic requirements of both institutions.

Admission

Candidates need to be admitted to the Doctoral program at both institutions. The minimum requirements to Doctoral admission include having obtained a relevant master degree with excellent grades and be meeting the English proficiency requirements of the two institutions. Any of the two institutions can decide to request additional course(s) and/or research assignment before final admission of the applicant. An Individualized Dual Degree Agreement specifying the details of the student's course of study, academic requirements, and plan for the completion of the Dual Degree will be signed by the two institutions for each applicant. The partner institution should not accept a student who has been nominated for the dual degree program at the main institution outside the dual degree framework.

Enrollment and Fees

Doctoral students need to register at both institutions throughout their study period. However, they will typically pay enrollment fees only at the main institution and will be exempted from paying similar fees to the partner institution unless otherwise specified in the Individualized Agreement. Any costs related to periods of research spent at the partner institution, attendance of national and international conferences, the organization of the PhD defense, and other costs specific to the Dual PhD Program shall be discussed and determined in mutual agreement between the supervisors from the partner institutions.

Research at the partner institutions

The PhD student shall spend alternate or consecutive research periods at both partner institutions. The research periods are to be agreed upon following consultation between the PhD student and the supervisors. The student is required to spend a minimum of six months (preferably longer time) at each of the partner institutions.

Supervision

The Doctoral student needs to have a supervisor at each of the two institutions. Also, before the end of the student's first semester in the dual degree program, an advisory committee needs to be formed. The Advisory Committee shall be appointed by the authorities of both institutions, in accordance with the regulations of both institutions.

Duration of the Dual Degree Doctoral Program

The total duration of the doctoral studies in a dual degree program normally takes between 4-7 years. Shorter or longer periods can be agreed by the two institutions as long as all the requirements are met within this period.

Doctoral Defense

The Examination Committee of Dual Doctoral students consists of the two supervisors and at least one other faculty member from each of the partner institutions, and at least one member who is external to both institutions. The Examination Committee shall be appointed by the authorities of both institutions, in accordance with the regulations of both institutions. All members of the examination committee need to be able to take part in the evaluation at the defense (preferably face-to-face or by exception via video conference, e.g. Skype, MS Teams, etc.).

Doctoral Degree

A dual degree with two separate certificates, one from each of the participating institutions will be awarded to the student. Permanent student records, including transcripts and diplomas will indicate that the program in which the student was enrolled is a Dual PhD Program. For transparency reasons, list of courses taken at the partner institution will be indicated on the student's transcripts.

Additional Requirements

- Establish a Joint Supervisory Committee composed by members from both partner institutions.
- Spend a minimum of six months (preferably longer time) at the partner institution depending on the program requirements of the partner institution.
- Have at least one accepted international peer reviewed publication.
- Actively participate (via an oral presentation or poster) in at least one international congress.
- Give at least one oral presentation before the Supervisory Committee during the student's research stay at the host institution.
- Follow the training on Scientific Integrity offered at KU Leuven or an equivalent training at UAEU.
- Additional courses at KU Leuven or UAEU as per discretion of the doctoral/advisory committee.

Degree Requirements

(The required coursework is based entirely on the courses offered in the PhD program in Chemical Engineering at UAEU)

Program Objectives

1. Offer a rigorous and innovative engineering education that promotes innovative research in engineering areas related to national priorities.
2. Prepare graduates to be inquisitive, to reason critically, and to lead nationally and globally.
3. Contribute to the advancement of the UAE knowledge-based economy and quality of life through community engagement, knowledge transfer, and industry partnership.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Identify gaps in the current state of knowledge and outline directions to produce new knowledge at the frontier of the chemical engineering discipline.
2. Apply advanced theories and research methodologies to critically analyze open research problems in chemical engineering and develop innovative solutions.

3. Produce and defend an original research work that advances the state of the art in the chemical engineering discipline.
4. Communicate research findings, orally and in writing, at a high level of proficiency to faculty, peers, and the lay public.
5. Evaluate and manage complex professional engineering activities and diverse ethical issues within the work context.

Department of Civil & Environmental Engineering

Master of Science in Civil Engineering

Description

This graduate program covers various Civil Engineering disciplines including Structural Engineering, Geotechnical Engineering, Construction Management, Highway and Transportation, Water Resources, Environmental Engineering, and Surveying. The necessity of maintaining the national development is placing increasing demands upon the government and private sectors to secure proper infrastructures, transportation networks, residential and industrial complexes. To help meet those demands, the program is designed to provide the community and industry with distinguished national manpower and highly qualified civil engineers for the sustainable development of the country. The program will train students intending to pursue their Ph.D. in Civil Engineering. Graduates of the program would provide the link between the advancements in Civil Engineering sciences and corresponding applications.

Program Objectives

1. Provide graduate students with a clear and comprehensive understanding of advanced civil engineering principles.
2. Train graduate students on addressing contemporary, sophisticated, and complex civil engineering issues or projects by utilizing or applying multidisciplinary problem-solving approaches and using modern engineering tools.
3. Serve the life-long learning needs of the engineering community and develop the graduate students' attitude to acquire further learning experiences and motivate them to get engaged in Ph.D. or advanced training programs
4. Provide efficient and productive research environment to carry out fundamental and advanced applied research to address civil engineering problems in general and regional and national problems in particular.
5. Provide the community and industry with quality technical assistance and highly qualified national manpower to lead the national industrial development plans.
6. Enrich the collaboration in research and graduate studies between the UAE University and the national and industrial sectors in the country and worldwide.
7. Provide a solid foundation for establishing a national research center for the Civil Engineering discipline in the country.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Describe highly specialized civil engineering principles, concepts, and methodologies.
2. Evaluate the performance of advanced civil engineering systems and components through the use of applicable research principles, analytical methods or modeling techniques.
3. Conduct advanced research to develop innovative solutions for highly complex civil engineering problems through the use of appropriately selected research methodologies and modern engineering tools.
4. Apply advanced multidisciplinary problem-solving approaches to critically analyze contemporary, sophisticated, and highly complex civil engineering problems.
5. Present and critique highly complex civil engineering issues and communicate effectively at a high level of proficiency.
6. Lead professional activities and manage ethical issues in highly complex civil engineering projects.
7. Implement the social, environmental, ethical, economic and commercial aspects to develop valid decisions affecting highly complex civil engineering projects.

Master of Science in Water Resources

Description

The Water Resources Master Program (WRMP) is an interdisciplinary graduate program offers Master of Science degree addressing all areas of Water. The program accepts both full and part time students since its commencement in September 1999. The WRMP offers thesis and non-thesis options. Students with thesis option need to complete 30 CHs for graduation; while non-thesis option students need to complete 33 CHs to graduate. The WRMP covers various aspects related to water resources including (but not limited to) Integrated Water Resources Management and Sustainability, Groundwater Hydrology, Surface Water Hydrology, Subsurface Contaminant Hydrology, Water Quality, Risk Assessment, Environmental Engineering and Protection, Environmental Impact Assessment, Water Science and Technology, Hydrological and Hydrogeological Modeling, Water and Wastewater Treatment, Water Desalination, Hydraulic and Coastal Systems, Water Recycling, Water Infrastructure, Water Resources Planning and Assessment using GIS and Remote Sensing, and Water Economics and Policy. The participation of several experts from different university colleges conforms to the multidisciplinary nature of the program and brings deep knowledge on enormous practical applications related to water resources.

Program Objectives

1. Educate and train graduate students to become competent in relevant issues of water resources.
2. Allow the program graduates, who may already be working in related institutions, to provide leadership and technical assistance to their institutions on water-resource related issues in accordance with the national needs.
3. Enrich and strengthen cooperation and scientific research in the field of water resources on national, regional, and international levels.
4. Motivate students to be easily engaged in life-learning experience in various areas related to Water Resources.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Gain comprehensive knowledge on Water Resources Assessment, Development and Management with specific reference to arid regions conditions
2. Acquire skills to address contemporary issues related to Water Resources and understand their social and economic impacts.
3. Develop skills of utilizing modern assessment and prediction tools related to water resources including field tests and computer software.
4. Communicate effectively and produce professional reports related to various disciplines of Water Resources.
5. Apply basic concepts in management, public policy and leadership in various areas of water resources.

Master of Science in Electrical Engineering

Description

The Master of science program in Electrical Engineering provides advanced study opportunities for electrical engineers. The program includes elective courses, enabling students to individually tailor their programs to provide emphasis in a particular specialization (e.g., Power, control, communication, etc.). Areas of study include power systems, power electronics, electronics, control systems, computer engineering and communication systems. The program has a thesis and non-thesis options. The program provides the graduates with all the necessary abilities to pursue in a PhD program and/or actively participate in the management and maintenance of new technological innovations as well as the involvement in the development and design of new products. Other objectives include establishing strong two-way relationships with the local industry and governmental establishments, in addition to promoting scientific research and development (R&D) activities.(Total credit hours is 30 for theses and 33 for no-theses).

Program Objectives

1. Provide graduates with a high level of analytical and applied skills necessary to actively participate in technology innovations in addition to maintaining the present ones in the UAE and abroad.
2. Promote the interaction between UAE University and the local industry. The industry is encouraged not only to actually participate in selecting the various courses and their contents but also to have an effective role in endorsing the research themes of the students, especially those on study leave from the industry. Consequently, co-supervision from qualified scientists and researchers from the industry is encouraged.
3. Promote the creative thinking skills among graduates necessary for lifelong learning.
4. Promote scientific research and development (R&D) activities.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Demonstrate understanding of highly specialized electrical engineering principles, concepts, and methodologies .
2. Evaluate the performance of advanced electrical engineering systems and components through the use of applicable research principles, analytical methods and modelling techniques.
3. Conduct advanced applied research to develop innovative solutions for highly complex electrical engineering problems through the use of appropriately selected research methodologies and modern engineering tools.
4. Apply advanced multidisciplinary problem-solving approaches to critically analyze contemporary, sophisticated, and highly complex electrical engineering problems.
5. Present and critique highly complex industrial electrical engineering issues and communicate effectively at a high level of proficiency.
6. Demonstrate leadership and management of professional activities and ethical issues in highly complex electrical engineering projects.
7. Recognize the social, environmental, ethical, economic and commercial considerations and professional responsibilities affecting highly complex industrial electrical engineering projects.

Department of Mechanical

Master of Engineering Management

Description

Engineering Management is the Process of Planning, Organizing, Staffing, leading and influencing People and Controlling Activities which have a Technological Component. These functions require foundation skills from engineering managers to manage themselves, staff, teams, projects, technologies and global issues of importance. These requirements being partly technical and partly business related, the Colleges of Engineering, and Business and Economics got together and launched the program in 2006. The program focuses on product development, process management, Quality Engineering and Project management from the technical side and leadership, management of technical innovations, supply chain, finance and decision making from the business side. The knowledge and skills thus gained are integrated through an action project.

Program Objectives

1. Management decision-making skills.
2. Professional leadership and management skills.
3. Knowledge of cost, financial and economic analysis.
4. Knowledge about management of existing and emerging technologies.
5. Continued intellectual growth in the engineering field.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Describe the designing process and synthesize strategies to manage designing an overall engineering system or product that meets desired needs.
2. Apply knowledge of mathematics, engineering and technology in managing engineering processes.
3. Analyze engineering problems relating to Quality and manufacturing operations and Synthesize Solutions.
4. Describe supply chain concepts and apply them to improve the business' overall and supply chain performance
5. Apply concepts to manage technological innovations and synthesize relevant business strategy.
6. Apply the accounting information for decision-making
7. Apply knowledge of applied statistics and decision techniques in managing engineering processes.
8. Analyze subjects with technical and business content and synthesize effective written reports and oral presentations
9. Apply theories of human behavior to analyze and evaluate the role of managers and leaders in driving effective employee behaviors in industrial organizational contexts.

Master of Science in Mechanical Engineering

Description

Mechanical engineering is one of the broadest and oldest branches of engineering and can require work that ranges from the design and manufacture of very fine and sensitive instruments with micro and nano scales, to the design and fabrication of huge power plants. The ME program emphasizes a fundamental approach to engineering in which the student learns to identify needs, define problems and apply basic principles and techniques to obtain a solution. This philosophy is incorporated in the classroom lectures, laboratory activities, design projects and research. ME graduates are expected to deal with moving devices and complex systems. Students learn about materials, design, manufacturing, solid and fluid mechanics, thermodynamics, heat transfer, control, and instrumentation, to understand mechanical systems. Specialized ME subjects include energy conversion, energy management, air conditioning, turbumachinery, composite materials and materials processing, combustion, fracture mechanics, selected topics in mechatronics and vibration, control engineering, introduction to robotics, selected topics in manufacturing and design, maintenance engineering, biomechanics and selected topics in bioengineering. (Total credit hours is 30 for thesis and 33 for no-thesis).

Program Objectives

1. Foster high quality graduate level mechanical engineering education and research and generate graduates with high levels of competence in fundamental and applied concepts of mechanical engineering.
2. Prepare graduates for successful careers in industry and/or academia and to promote and instil ethical practice and life-long learning.
3. Enrich the research collaboration between the university and the industrial sectors in the country and worldwide.
4. Graduate professionals and leaders in the global industries.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Apply knowledge and skills ethically for solving mechanical engineering problems and drawing conclusions.
2. Conduct mechanical engineering studies utilizing experimental, computer software and other modern tools.
3. Communicate effectively, both orally and in writing to present technical and research work.
4. Conduct independently and with a team quality scientific and applied research.

Doctor of Philosophy in Mechanical Engneering

Description

The Doctor of Philosophy in Mechanical Engineering (PhD in Mechanical Engineering) provides students with a unique opportunity to demonstrate innovation in a wide range of mechanical engineering research areas. The PhD in Mechanical Engineering degree is awarded to candidates who successfully complete a program of advanced courses, qualification and research requirements and dissertation defense. Students are expected to carry out an independent investigation in a mechanical engineering research area under supervision of experienced researchers. Graduates of the program are anticipated to meet the challenges in the mechanical engineering discipline and provide innovative solutions based on the most recent developments in mechanical engineering.

Program Objectives

1. Offer a rigorous and innovative engineering education that promotes innovative research in engineering areas related to national priorities.
2. Prepare graduates to be inquisitive, to reason critically, and to lead nationally and globally.
3. Contribute to the advancement of the UAE knowledge-based economy and quality of life through community engagement, knowledge transfer, and industry partnership.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Identify gaps in the current state of knowledge and outline directions to produce new knowledge at the frontier of the mechanical engineering discipline.
2. Apply advanced theories and research methodologies to critically analyze open research problems in mechanical engineering and develop innovative solutions.
3. Produce and defend an original research work that advances the state of the art in the mechanical engineering discipline.
4. Communicate research findings, orally and in writing, at a high level of proficiency to faculty, peers, and the lay public.
5. Evaluate and manage complex professional engineering activities and diverse ethical issues within the work context.

College of Food Agriculture and Veterinary Medicine

Department of Food Science

Master of Science in Food Science

Description

MSc Food Science program aims to give students an opportunity to gain advanced knowledge related to Food Quality and Safety, Food Chemistry and Analysis, Food Processing and Engineering as well as Innovative and Functional Foods. The program is designed to reinforce and enhance the student's knowledge of scientific principles and processes used to produce safe and high-quality foods. In addition, the program provides a science-based professional education that encompasses theory, practical research, and application of science and technology to conventional and novel foods. The program is designed to produce expert food science postgraduates with the knowledge and skills to develop and further excel in the professional world.

Program Objectives

1. Provide students with advanced theoretical and research knowledge in the field.
2. Empower students to integrate and apply knowledge of food science to real-world issues in food systems, components, products, and processes.
3. Produce highly trained graduates able to meet leadership needs of national and international professional careers.
4. Develop well-prepared graduates to become research leaders and innovators in food science field.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Discuss advanced concepts, theories, and emerging food science methodologies.
2. Apply core knowledge of food science to identify problems and propose solutions in the field.
3. Design and conduct scientific research in the field of food science, and use quantitative methods to analyze results.
4. Communicate scientific and technical knowledge in written and oral forms to diverse audiences.
5. Demonstrate knowledge of food science contemporary issues, ethics, and professional responsibility.

Degree Requirements: Total Credit Hours: 30

Doctor of Philosophy in Food Science and Technology

Description

The PhD program in Food Science and Technology aims to provide students an opportunity to gain advanced knowledge related to Food Quality and Safety, Food Chemistry and Analysis, Food Process technology and Engineering as well as Innovative and Functional Foods. The program is designed to reinforce and enhance the knowledge of the students in scientific principles and processes used to produce safe and high-quality foods. In addition, the program provides a science-based professional education that encompasses theory, practical research, and application of science and technology to conventional and novel foods. Furthermore, this program is designed to produce food science postgraduate experts with the knowledge and skills essential for excelling in the professional world. PhD graduates in Food Science and technology will have an opportunity to be academic leaders, research scientists, and take managerial positions in industrial sectors.

Program Objectives

1. To prepare and create future leaders of excellence in research, industry, and government sectors.
2. To enhance R & D capabilities with advanced skills among the graduates to serve the society.
3. To improve student's competencies in critical thinking, problem solving, leadership, team work and effective communication.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Prove deep understanding of diverse aspects of food science.
2. Conduct original research and apply multidisciplinary approach for the development of food science discipline.
3. Display competence in scholarly writing and oral communication of the scientific topics related to food science.
4. Collect and interpret the scientific data using advanced techniques.

Master of Science in Horticulture

Description

Graduates from the Master's Degree in Horticulture are in high demand in the current job market. The occupational positions which can be filled by graduates of this proposed program include, but are not limited to, horticulture architects and designers, city horticulturists, research assistants and university instructors, among many others. Students can focus their study in the areas of horticulture, agro-ecology, biotechnology, breeding, crop physiology, crop production, mineral nutrition, modeling and quantitative horticulture, plant growth and development, post-harvest physiology, renegotiation/restoration, as well as sustainable water management.

Program Objectives

1. To prepare future leaders for industry, business and government agencies.
2. To prepare students for PhD programs in various Horticultural science disciplines.
3. To train students in interdisciplinary programs with emphasis on achieving career goals and objectives.
4. To graduate students who are competitive in national and international job markets.
5. To enhance students' abilities in scientific methodology in collecting, summarizing and analyzing research data.
6. To prepare students to engage in high-level, horticultural problem solving.
7. To train students to meet job requirements, enhance skills and to pursue life-long learning.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Discuss contemporary issues related to horticultural challenges.
2. Evaluate horticultural components, processes and the role of anthropogenic factors.
3. Evaluate available resources, issues and challenges related to horticultural in UAE.
4. Design and conduct scientific horticulture research, and use quantitative methods to analyze results.
5. Demonstrate the ability to apply knowledge and skills to resolve problems, creatively and independently.
6. Evaluate issues of ethical behavior in science, critically and reflectively.
7. Demonstrate strong written and oral presentation skills.

Degree Requirements: Total Credit Hours: 36

Doctor of Philosophy in Horticultural Sciences

Description

The Ph. D. in Horticultural Science provides students with a solid foundation from where to begin an international academic career in life sciences. Graduates will have gained the ability to conduct original interdisciplinary research and scholarly work related to horticultural production systems and - plants at the highest level without supervision. The findings of the student's research work advance the development of sustainable horticultural production practices and technologies, adapted plant germplasm, novel sources of food, and concepts for urban greenery. Accompanying coursework provides students with competencies related to the proper planning, conduction and statistical analysis of horticultural experimental work. It broadens their horizon and allows them to place their specialized research findings into a wider academic-, ecological-, or socio-economic context. Students train their ability to critically reflect on experimental results of their own and others and interact collaboratively with researchers and students from other disciplines. The coursework also broadens student's technical competencies, builds their confidence in oral and written communication, and polishes their leadership skills.

Program Objectives

1. To prepare and create future leaders of excellence in research, industry, and government sectors.
2. To enhance R & D capabilities with advanced skills among the graduates to serve the society.
3. To improve student's competencies in critical thinking, problem solving, leadership, team work and effective communication.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Appraise advanced and in-depth understanding of the area of specialization within the horticultural sciences.
2. Independently identify gaps in the current global understanding of horticultural system functioning and management, and conduct interdisciplinary scientific research targeted at closing these.
3. Deploy advanced techniques to analyze, interpret and critically reflect on scientific results in broad and narrow contexts.
4. Apply professional written and oral communication skills to deliver scientific outputs in the horticultural field.
5. Demonstrate leadership qualities in the area of specialization.

College of Humanities and Social Sciences

Department of Arabic Language & Literature

Master of Arts in Arabic Language and Literature

Description

The Master's degree in Arabic Language and Literature is a one-track program that combines several fields of Arabic linguistics and literary criticism. Students' area of specialization is based on their dissertation topic. The program requires completing 30 credit hours, composed of 18 mandatory credits, 6 elective credits, and 6 credits for the dissertation. Students are expected to complete the Master's degree within three academic semesters. The program is offered to both female and male students. The lectures are mixed-gender and take place in the male section. This program requires regular attendance in compliance with UAEU regulations and the academic calendar for both full-time and part-time students.

Program Objectives

1. Develop the students' knowledge of the branches of the specialization and their sources, which enables them to evaluate their cognitive achievement.
2. Enable the student to study the Arab heritage in light of contemporary literary and linguistic criticism to achieve authenticity and modernity.
3. Produce research within a general framework of high skill and innovation, which enables the student to demonstrate intellectual independence and self-creation

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Analyze the literary texts in light of ancient and modern criticism theories.
2. Explain the structural elements in the linguistic and literary lesson and the stages of their development.
3. Address the questions of the linguistic phenomenon at its various levels, based on the student's readings and research.
4. Evaluate published critique and rhetoric according to their knowledge of Arabic literature and its theoretical and practical connections with other kinds of literature.
5. Conduct research according to academic writing and its scholarly standards.

Department of Geography and Urban Sustainability

Master of Science in Remote Sensing and Geographic Information Systems

Description

The Remote Sensing and Geographic Information Systems Master of Science Program at UAE University is the first of its kind in the region. It is designed to provide you with the theoretical background and practical skills to start or advance your career in remote sensing and GIS. Our curriculum has been specifically developed to suit students from diverse academic backgrounds and professional occupations. No prior remote sensing or GIS experience is required to excel in the program. (Total credit hours is 30 for theses and 34 for no-theses).

Program Objectives

1. Discuss the theoretical background and practical skills for a career in Remote Sensing or GIS.
2. Identify the recent advances in Remote Sensing, GIS and GNSS relating that with scientific research and its role in the society.
3. Apply analytical and spatial thinking skills needed for successful use of remote sensing and GIS in solving spatial problems.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Discuss the theoretical principles of remote sensing and GIS and their role in modeling and solving environmental, urban and social issues.
2. Recognize advanced analysis and interpretation skills needed in remote sensing and GIS.
3. Apply practical remote sensing and GIS procedures for assessing and solving environmental, urban, geologic and societal problems.
4. Communicate remote sensing and GIS related ideas and results both orally and in writing.
5. Develop remote sensing and GIS project management, team work and leadership skills.
6. Produce scientific research related to the applications of remote sensing and GIS.

Degree Requirements: Total Credit Hours: 30

Master of Governance and Public Policy

Description

The Master of Governance and Public Policy (MGPP) degree aims to impart knowledge, skills, and analytic capability about the rational application of methods, practical tools and techniques in public governance including the formulation, implementation, and evaluation of public policy in the dynamic and complex era of globalization. The Program combines relevant contemporary theories, professional skills, practical knowledge, high level research skills and critical thinking to approach the questions of governance and policy management in the new millennium. The MGPP equips students with cutting-edge skills to undertake open, accountable, responsive, and inclusive leadership to address the administrative, ethical, financial, organizational, and political challenges in delivering superior governmental services and making effectual decisions.

Program Objectives

1. To prepare professionals and public policy leaders to discuss, analyze, and evaluate public policies.
2. To appreciate the complex and cross-sectorial nature of public policy, public policy challenges, and public policy solutions.
3. To implement skills necessary to address important criteria of transparency, accountability, responsive, effectiveness, efficiency, and inclusive in all policy processes.
4. To develop leadership skills necessary to lead national and local institutions and perform administrative, financial, organizational, and political activities.
5. To exercise ethical and moral standards in public policy processes and leadership behaviors.
6. To equip students with various analytical tools to effectively diagnose and proffer solutions to complex public policy issues .

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Comprehend selected theories and methods in public governance, policy analysis, market-government relations, macro and micro economics, public budgeting, leadership, and research in the analysis and formulation of public policy.
2. Conduct governance and public policy research using appropriate research methods, ethics procedures, and statistical analysis
3. Apply qualitative and quantitative skills in the formulation of public policy independently and in teams.
4. Use different tools and techniques in policy analysis, stakeholder management, successful policy implementation, effective program evaluation, and financial management
5. Communicate descriptive and analytical knowledge effectively in written and oral format to various audiences.
6. Demonstrate preparedness for continued reflective practice and lifelong learning in public policy and governance.

Degree Requirements: Total Credit Hours: 36

Department of Social Wellbeing

Master of Social Work

Description

Master of Social Work (MSW) programs prepare graduates for advanced professional practice in an area of concentration. The MSW program will prepare UAEU graduates to enter the job force as specialized practitioners, accepting leadership roles within the areas of health/mental health, criminal justice, applied research, policy analysis, community education, schools and in the planning and provision of social services in other areas. The Master of Social Work consists of 30 credit hours of specialized course-work and practicum for students with a Bachelor degree in Social Work (BSW). The MSW program also welcomes students with a bachelor degree in disciplines other than social work. However, for these students, the program of study will consist of foundation courses (30 credit hours) in year 1 and specialization courses (30 credit hours) in year 2 for a total of 60 credits hours.

Program Objectives

1. Practice in accordance with social work values and ethics that acknowledge the history and laws of UAE society.
2. Practice in a culturally competent manner that promotes quality of life and well-being, human rights and social and economic justice, with diverse Arab, Muslim and expatriate populations of the UAE and GCC.
3. Use, produce and apply research knowledge to enhance their skills for practice with the diverse Arab/Muslim families, children, individuals, groups, organizations, communities, and societies of the UAE and GCC.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Use communication/facilitation skills ethically in building empowering relationships with the diverse populations in the UAE, the Arab Gulf and internationally.
2. Employ skills for influencing policy formulation and change in communities that advance social and economic justice.
3. Apply knowledge and leadership skills in managing projects, and working with community groups and/or organizations to address populations at risk and engage in community resource development
4. Demonstrate skills in quantitative/qualitative research design, data analysis, program evaluation, practice evaluation, community needs assessments, and knowledge dissemination.
5. Apply the knowledge, values, ethical principles, and skills of a generalist social work perspective to practice with diverse social systems in the UAE, the Arab Gulf and internationally.
6. Analyze social policies at a local, regional, national, and international level.
7. Evaluate existing research studies and one’s own practice interventions.
8. Function within the structure of organizations and service delivery systems and seek necessary organizational change.

Department of Languages and Literature

Master of Arts in English

Description

The MA in English (MAE) offers specializations in the disciplines housed in the Department of Languages and Literature at UAEU, including literature and cinema studies, as well as theater and their intersections. Expanding on analytical and critical thinking skills gained throughout their undergraduate programs, students receive qualifications for careers revolving around informed, eloquent text analysis and creative expression. These careers include but are not limited to teachers, literary translators, editors, and writers. Successful graduates will further be capable to demonstrate the significance of creative representations of their own cultural background for global markets in the areas of literature, film production, and theater.

Program Objectives

1. Illustrate essential principles and advanced terminology in the field of English Studies
2. Apply solid knowledge about historical and cultural contexts in which to situate selected literary texts
3. Practice advanced research methodologies
4. Demonstrate different theories and approaches to text analysis
5. Practice the competencies required for the creation of literary print or digital texts
6. Evaluate discipline-specific teaching methodologies

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Assess advanced discipline-specific terminology in speech and writing
2. Critique a wide variety of literary texts from different periods and cultures
3. Explain advanced research methodologies
4. Appraise key critical approaches within literary criticism
5. Create literary print or digital texts
6. Prepare discipline-specific teaching methodologies

Degree Requirements: Total Credit Hours: 30

Department of Media and Creative Industries

Master of Arts in Communication

Description

The Master of Arts in Communication is a two-year full-time or five-year part time program. The program has two concentrations from which prospective candidates can choose either: Media Studies or Media Practices. Both concentrations require a 6-credit hour thesis. The master's program in Media and Communication is aimed at the following: graduates of media and communication who desire higher academic exposure and qualifications, and who may wish to use an MA qualification as a pathway to PhD studies; graduates of Media and Communication who are working as media and communication researchers but desire more in-depth knowledge and competence in the field; media and communication professionals who require a higher degree for career progression.

Program Objectives

1. To provide students with an up-to-date understanding of essential theories and concepts of media communication as they relate to the discipline's practices and discourses within national, regional, and international contexts.
2. To enable students to produce a sound scholarly research based on a chosen relevant subject of enquiry using appropriate methods and procedures.
3. To provide a specialized practice-based curriculum that prepares students for a career in strategic communication and allied industry.
4. To familiarize students with current new media and digital technologies in the media and communication industries; as well as a critical understanding of their transformative and disruptive potentials.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Apply theories and concepts of communication as they relate to the discipline's practices and discourses within national, regional, and international contexts.
2. Demonstrate strategic level analysis and critical thinking when evaluating communication programs of an organization.
3. Design knowledge driven strategic communication plans using appropriate hardware and software technologies.
4. Conduct a sound academic research based on a socially relevant topic; and using appropriate research tools and methodologies.

Degree Requirements: Total Credit Hours: 36

			Course Credits
Core Courses (Req CH:9)			
Required Courses			(Required Credit Hours:9)
MASC	611	Mass Communication Theory	3
MASC	612	Mass Communication Research Methods	3
MASC	641	Media Ethics	3

Course Credits

Concentration Requirements (Req CH:27)

Students should take one of the following Concentration:

(Required Credit Hours:27)

Course Credits

1- Media Practices Concentration (Req CH:27)

Required Courses

(Required Credit Hours:9)

MASC	613	Multimedia Storytelling	3
MASC	621	New Media Data Analysis	3
MASC	630	Media Management	3

Elective Courses
((Students must select four courses from the list below))

(Required Credit Hours:12)

MASC	620	Integrated Communication Campaigns and Strategies	3
MASC	622	Contemporary Journalism in Context	3
MASC	623	Multimedia Production	3
MASC	633	Seminar in Media and National Identity	3
MASC	642	Seminar in Media, Innovation, and the Creative Industries	3

Thesis

(Required Credit Hours:6)

MASC	650	Thesis	6

Course Credits

2- Media Studies Concentration (Req CH:27)

Required Courses

(Required Credit Hours:18)

MASC	610	Communication and Social Change	3
MASC	625	History of Mass Media	3
MASC	631	Media in a Global Context	3
MASC	632	Media, Policy, and Regulation	3
MASC	633	Seminar in Media and National Identity	3
MASC	642	Seminar in Media, Innovation, and the Creative Industries	3

Elective Courses (Students must select one course from the list below)			
			(Required Credit Hours:3)
MASC	620	Integrated Communication Campaigns and Strategies	3
MASC	622	Contemporary Journalism in Context	3
MASC	623	Multimedia Production	3

MASC	650	Thesis	6

College of Information Technology

Department of Information Systems and Security

Master of Science in Information Security

Description

The Master of Science in Information Security program, offered by the College of Information Technology, is designed to develop expertise in leadership and operations in the area of information security. The program is geared towards meeting the growing need for information technology specialists in information security. The program provides graduates with depth courses designed to enhance their skill set and knowledge in information security as well as breadth information technology courses. The program provides the needed technical and managerial expertise to plan, acquire, operate, manage and evaluate an organization's information security system of operations. Students enrolled in this program are expected to pursue a plan of study to assure professional competence and breadth of knowledge in the field of information security. The emphasis of this specialization is on applying proven and innovative practices for building industry-standard secure systems, applications and networks. This program is for highly motivated groups of working professionals and recent Bachelor's degree graduates. The program is designed to impart knowledge and develop the skills needed to meet current and future information security needs of the government and corporate organizations, as well as preparing students to pursue a Ph.D. in information security or related areas.

Program Objectives

1. Identify and effectively use techniques and tools necessary in information security practice;
2. Develop project management and leadership skills to secure enterprise IT architectures;
3. Apply security principles, legal and ethical responsibilities to the development, and deployment of information security policies;
4. Improve skills and expand knowledge for life-long learning and professional growth;
5. Comply with international information security standard and local regulatory policies.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Apply information security knowledge and effective security strategies and standards.
2. Design effective security solutions based on given requirements.
3. Evaluate in depth enterprise security systems.
4. Execute ethically project work or research that contributes significantly to the information security discipline.
5. Demonstrate advanced oral and written communication skills individually and collectively.
6. Analyze critically emerging information security concepts, models, techniques, and solutions.

Master of Science in Information Technology Management

Description

The College of Information Technology offers the Master of Science in Information Technology Management program that produces graduates who have a thorough understanding of information systems and technologies along with relevant management, communication, and decision-making skills. Students learn how to integrate information systems technology expertise and management skills to effectively implement organizational solutions. This combination of advanced technical knowledge and management skills with organizational strategy put graduates of this program in a position to succeed as IT leaders and technical experts.

Program Objectives

1. Develop in depth knowledge in information systems and technologies.
2. Integrate information systems technology expertise and management skills to effectively implement organizational solutions.
3. Lead IT projects and take a major role in building tomorrow's economy.
4. Improve their skills and expand their knowledge for life-long learning and professional growth.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Demonstrate advanced understandings of the complex body of knowledge that involve the different IT management approaches.
2. Evaluate in depth enterprise architectures for developing and delivering products and services to the marketplace.
3. Develop ethically project work or research that contributes significantly to the current business needs and compliant with cutting-edge technology.
4. Develop enterprise-wide IT management skills and expand the knowledge for lifelong learning and professional development.
5. Critically analyze, synthesize, and make use of management information to solve complex IT management problems
6. Demonstrate advanced oral and written communication skills in a teamwork environment.

Department of Computer Science and Software Engineering

Master of Science in Software Engineering

Description

The Master of Science in Software Engineering offered by the College of Information Technology is designed to develop technical and managerial expertise in software engineering. The program focuses on meeting the growing needs for software engineers. Students acquire solid foundations in theory and practice in software engineering, with in-depth exposure to the state-of-the-art in software development processes, methodologies, and tools. The program is designed to impart knowledge and develop the skills needed to meet current and future information technology needs of government and corporate organizations, as well as to prepare students for Ph.D. degree programs in IT and related areas. Teamwork is emphasized throughout the curriculum to provide students with essential skills to be successful software engineering professionals. The program is intended for highly motivated groups of working professionals and recent Bachelor's degree graduates.

Program Objectives

1. Assume leadership roles to promote professional and organizational goals that address the needs of the community;
2. Uphold and apply the principles of professional and ethical responsibilities to the design, development, and deployment of computing artifacts;
3. Maintain professional competency in light of the advancements in the related disciplines, and develop professionally through continuing training and advanced education in response to changes in roles and responsibilities;
4. Contribute to the body of novel software products, services, and knowledge;
5. Collaborate professionally within or outside of their disciplines at national and international levels.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Apply software engineering knowledge to build robust, reliable, and maintainable software.
2. Design complex systems based on efficiency, cost and data availability.
3. Evaluate in depth the relative merits of software systems and artifacts at different levels of system architecture.
4. Analyze Critically emerging software models, techniques, and technologies.
5. Execute ethically project work or research that contribute significantly to Software Engineering discipline.
6. Demonstrate advanced oral and writing communication skills individually and collectively

Doctor of Philosophy in Informatics and Computing

Description

The Doctor of Philosophy (PhD) program in Informatics and Computing is an interdisciplinary research program that provides students with a unique opportunity to study the application of the latest information and computing technologies to a vast variety of fields while considering their impact on individuals, organizations, and society. It fosters innovations in a wide range of research areas including High Performance and Parallel Computing, Big Data and Cloud Computing, Internet of Things, Design and Analysis of Next-generation Networks, Bio/Health Informatics, and Cyber and Information Security. The program is designed to prepare specialists capable of providing leadership and necessary technical expertise to governmental, private, and academic sectors, and to empower them with the knowledge and skills to develop and further excel in the professional world.

Program Objectives

1. Offer rigorous and innovative informatics and computing education, promoting innovative research in areas related to national priorities
2. Prepare graduates to be inquisitive, to reason critically, and to lead nationally and globally.
3. Enrich the UAE quality of life and contribute to the advancement of its knowledge-based economy

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Demonstrate breadth of knowledge in emerging trends in informatics and computing disciplines and in-depth knowledge in specific areas of interest. (Knowledge)
2. Apply theory and advanced methodologies to implement innovative informatics and computing solutions. (Skills)
3. Analyze and critique the state of learning in informatics and computing, and propose solutions for identified open research problems (Skills, Self-Development)
4. Create and defend original research work that advances the state of the art in informatics and computing. (Autonomy and Responsibility)
5. Communicate complex research findings orally and in writing to faculty, peers, and the lay public. (Role in Context)
6. Articulate strategies to mitigate highly complex and diverse ethical issues related to informatics and computing ethical issues. (Self-Development)
7. Demonstrate self-direction and originality in tackling, solving and furthering autonomy in the study of advanced informatics and computing systems. (Self-Development, Autonomy and Responsibility)

Master of Science in Internet of Things

Description

The Master of Science in Internet of things (IoT) is an interdisciplinary program that provides students with a unique opportunity to study the application of the latest information and communication technologies to a vast variety of fields while considering their impact on individuals, organizations, and society. It fosters innovations in a wide range of areas including Embedded Systems Design, Wireless and Mobile Connectivity, Application and Service Development, Data Mining, and Information Security. The program is designed to prepare specialists capable of providing leadership and necessary technical expertise to governmental, private, and academic sectors, and to provide them with the knowledge and skills to develop and further excel in the professional world.

Program Objectives

1. Offer rigorous and innovative computing education, promoting innovative research in areas related to national priorities
2. Prepare graduates to be inquisitive, to reason critically, and to lead nationally and globally.
3. Enrich the UAE quality of life and contribute to the advancement of its knowledge-based economy.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Discuss the evolution of the IoT paradigm, the different application areas, inter-disciplinary and emerging developments in this field.
2. Evaluate the technologies associated with the IoT to reflect on, justify and recommend decisions.
3. Design an IoT solution for a single or a system of devices to solve problems to meet a set of requirements.
4. Develop project or research work that contributes to the IoT discipline taking into account relevant considerations such as ethics, economics, society, environment and sustainability.
5. Demonstrate advanced oral and written communication skills individually and collectively.

Degree Requirements: Total Credit Hours: 30

			Course Credits

College of Law

Doctor of Philosophy in Law

Description

The awarded degree in recognition of the completion of the requirements of this program is "Doctorate of Philosophy in Law", and it will be offered in Arabic. However, there will be an opportunity for the students to specialize in one branch of law through the elective courses studied and the subject of the dissertation which they will argue/defend. The Program will be offered at UAEU in Al Ain campus.

Program Objectives

1. Develop scholarly inquiry grounded in research and the reality of practice in the field of law.
2. Offer a rigorous and innovative discipline-based knowledge that prepares students to succeed in a globally challenging, competitive and changing environment.
3. Enhance professional growth, lifelong learning skills and leadership competencies in the area of specialization for career opportunities in different sectors.
4. Adhere to professional integrity and research ethics, and be committed to values related to the field of law.
5. Prepare graduates to be inquisitive, to reason critically, and to communicate clearly and effectively.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Compare the Legislative, Jurisprudential and Judiciary trends in the field of specialization.
2. Criticize legal provisions, jurisprudential opinions and judicial trends in the UAE and comparative legal systems.
3. Undertake research that includes knowledge in the field of specialization.
4. Communicate the key concepts in the field of specialization using appropriate language.
5. Develop innovative solutions for contemporary legal issues.
6. Express commitment to the relevant ethical and professional rules in the field of law.
7. Lead a team to provide solutions for the relevant legal issues

Degree Requirements: Total Credit Hours: 60

Course Credits

Part 1: Core Requirement (12 Cr. Hrs.)

Required Courses			(Required Credit Hours:12)
LAW	700	Quantitative and Qualitative Research Methods	3
LAW	701	Advanced Legal Research: Writing and Presentation	3
LAW	702	Selected Legal Readings - E	3
LAW	703	Advanced Studies in Comparative Legal Systems	3

Part 2: Elective Requirement
(12 Cr. Hrs including at least 9 Cr. Hrs. of courses taught in English)

First Group: Public Law			(Required Credit Hours:12)
PUBL	705	Criminal Law	3

Department of Public Law

Master of Public Law

Description

The public law specialty emphasizes the laws related to the state, as sovereign state, such as Criminal Law, Administrative Law, International Law, and Constitutional Law. The program is designed to enhance the graduates' professional skills, their abilities to think critically, to analyze legal arguments, to articulate ideas, to research efficiently, to write effectively, and to support the college's academic position as a remarkable university within the UAE and abroad

Program Objectives

1. Build and develop in depth a solid and advanced scientific base of knowledge in public law among the students.
2. Enable students to conduct in depth researches and specialized legal studies in different areas of public law.
3. Develop creativity and an advanced continuous knowledge in the field of Public Law.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Analyze cases and legal texts in a correct scientific manner.
2. Criticize jurisprudential and judicial view points and trends in general, and within the UAE legal system in particular.
3. Conduct in depth a legal research in the field of public law, and analyzes the findings, in accordance with the correct scientific methodologies.
4. Lead a team work to solve relevant legal problems.
5. Present his/her scholarly activity orally in a correct scientific manner.
6. Demonstrate self-learning skills with regard to real and novel issues.
7. Undertake his/her duties professionally in accordance with ethical principles.

Department of Private Law

Master of Private Law

Description

Private Law is the branch of law that deals with the relations between individuals or institutions, rather than relations between these and the state. This specialty attracts the law graduates who are looking to get recruited in trading companies, law firms, economic establishments, and the judiciary. The program aims at providing graduates with adequate research and professional skills through focusing on financial transactions between individuals whether it be civil or commercial transactions.

Program Objectives

1. Build and develop in depth a solid and advanced scientific base of knowledge in private law among the students.
2. Enable students to conduct in depth researches and specialized legal studies in different areas of private law.
3. Develop creativity and an advanced continuous knowledge in the field of Private Law.
4. Provide students with the highest values and ethics necessary for the exercise of the legal profession.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Analyze cases and legal texts soundly and scientifically.
2. Compare jurisprudence, various judicial and legislative trends, especially in the UAE legal system.
3. Undertake in-depth scientific research in a field of the Private Law utilizing curriculum-based legal research methods and drawing from scientific sources.
4. Present legal arguments in a sound and proper manner.
5. Perform tasks assigned to him/her in a professional and ethical manner
6. Lead a teamwork to solve relevant legal problems.

College of Medicine

Master of Science in Genomic Medicine

Description

The M.Sc. in Genomic Medicine is a ground-breaking program and the first of its kind in the United Arab Emirates. The program is designed to address the critical need for the professional development of healthcare workforce from different disciplines (e.g. medicine, nursing, scientists and biotechnologists) in genomic knowledge that will impact on their service delivery to patients in the United Arab Emirates. In this program, the students will learn from experts in the field to prepare for a new era of personalized healthcare. It consists of courses, laboratory- and computer-based practical sessions. This program will also promote and foster students'; intellectual curiosity, creativity, and critical thinking in the practical application of genomics and bioinformatics through an original research project chosen from a wide selection of translational topics in the field of Genomic Medicine.

The degree awarded in recognition of the completion of the requirements of this program is "M.Sc. in Genomic Medicine". The corresponding study plan consists of 33 Credit Hours (CH). A student enrolled in the program must complete all requirements in a maximum of six semesters after enrolment. The program requires the completion of a thesis. The 33 CH are partitioned as follows: 20 CH as compulsory courses, 4 CH as elective courses, 9 CH of research and associated thesis on a state-of-the-art project related to genomic medicine. The program allows for both full and part time modes of study.

Program Objectives

1. Deliver graduates equipped with the necessary skills to understand and integrate genomic medicine in current and future clinical practice.
2. Prepare competent graduates to lead national and global health systems forward in the genomic era.
3. Promoting state-of-the-art research in national health-related priority areas contributing to the advancement of knowledge in the field of Medical Genetics and Genomics.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Explain genetics concepts and the genetic basis of disease.
2. Critically discuss genome technologies and their actual and potential impact in clinical practice.
3. Interpret genomic information as part of a diagnostic service or treatment protocol.
4. Identify the latest developments in research methodologies and clinical application.
5. Formulate a research hypothesis, collect and analyse scientific data, and undertake professionally relevant research.

Master of Medical Sciences

Description

The Master of Medical Sciences programs are designed to cater to the needs and aspirations of individual students, the expressed needs of the relevant institutions in the UAE, and the current strengths in different disciplines in the CMHS. Currently the structure of the M. Med. Sc. curriculum is organized into three tracks: “Microbiology & Immunology”, “Pharmacology and Toxicology” and “Biochemistry and Molecular Biology (BMB)”. 1- Biochemistry & Molecular Biology The Biochemistry and Molecular Biology tack is a multi-disciplinary program which provides students with a foundation in Biochemistry and Molecular and Cellular Biology as well as intensive state-of-the-art laboratory research training. Research areas in the Biochemistry Department focus on the Biochemical, Molecular and Cellular basis of human diseases including Cancer Biology, Diabetes, and Neurodegenerative disorders, in addition to areas in Gene Regulation, Bioinformatics, Proteomics, Epigenetic, Signal Transduction, Oxidative Stress, Mitochondrial Dysfunction, and Immunology and Biochemical Toxicology. 2- Microbiology & Immunology The Microbiology and Immunology track provides students with core knowledge at the respective levels in basic immunology, the pathogenesis of autoimmune and infectious diseases, the molecular details of host-pathogen interactions, the molecular biology and molecular epidemiology of selected pathogens, and the genetic manipulation of pathogens. 3- Pharmacology & Toxicology The Department of Pharmacology and Therapeutics offers a multidisciplinary program designed to prepare highly qualified individuals to be successful scientists in academic and industrial biomedical research. The pharmacology and toxicology faculty members carry out research in cancer pharmacology, neuropharmacology, cardiovascular pharmacology, drug metabolism, toxicology, proteomics, molecular pharmacology, receptors and signal transduction, and drug design.

Program Objectives

1. Biomedical Knowledge.
2. Interpersonal & Communication Skills.
3. Scholarly Research.
4. Professionalism and ethics.
5. Publications and presentations.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Apply the knowledge of biomedical sciences in their scholarly activities.
2. Demonstrate communication skills (with peers and colleagues) that are effective in the exchange and translation of knowledge and information.
3. Apply professional ethics and commitment to their scholarly activities.
4. Engage in collaborative health science research.
5. use quantitative and qualitative methods present and defend their scientific research findings.

Degree Requirements: Total Credit Hours: 36

			Course Credits
College Requirements			
Required Courses			
			(Required Credit Hours:8)
PRR	600	Principles of Research	1
ETHC	600	Ethical Conduct in Medical Research	1
STA	600	Biostatistics & Experimental Design	2
JRC	601	Biomedical Sc Journal Club 1	1
JRC	602	Biomedical Sc. Journal Club II	1
SEM	601	Biomedical Sc. Seminar I	1
SEM	602	Biomedical Sc. Seminar II	1
			Course Credits
Biochemistry and Molecular Biology Track			
Required Courses			
			(Required Credit Hours:9)
BMB	601	Techniques in Biochemistry	2
BMB	602	Advanced Molecular Biology	3
BMB	603	Advanced Cell Biology	2
BMB	604	Advanced Topics in Biochemistry	2
Microbiology and Immunology Track			
Required Courses			
			(Required Credit Hours:6)
MMIM	601	Molecular Bacteriology – Gene, Structure, Pathogenesis	2
MMIM	602	Principles of Cellular and Molecular Immunology	2
MMIM	603	Molecular Principles of Viral Replication and Pathogensis	2

			Course Credits
Pharmacology and Toxicology Track			
Required Courses			
			(Required Credit Hours:8)
PHTX	601	General Systemic Pharmacology	2
PHTX	602	Molecular Mechanism of Drug Action	2
PHTX	603	Neurotransmitters in Health and Diseases	2
PHTX	604	Molecular Principles of Organ Toxicity	2
Thesis/Project (CH. Req. 4 to 18)			

18 Credit Hours for Thesis option and 4 Credit Hours for non-thesis option			
			(Required Credit Hours: 4 - 18)
RSCH	600 *	Research	18
RSCH	601 **	Research Project	4
		* Thesis Only	
		** Non-Thesis Only	
			Course Credits

Elective Courses (CH. Req. 1-18)

(Thesis option: 1 CH. for BM track, 4 CHs. for MI track, 2 CHs. for PT track) (Non-Thesis option: 15 CHs. for BM track, 18 CHs. for MI track, 16 CHs. for PT track)			
			(Required Credit Hours: 1 - 18)
BMB	603	Advanced Cell Biology	2
BMB	604	Advanced Topics in Biochemistry	2
BMB	606	Special topics in Biochemistry	1
PHTX	619	Advances in Pharmacology	1
PHTX	601	General Systemic Pharmacology	2
PHTX	604	Molecular Principles of Organ Toxicity	2
PHTX	624	Modern Medicinal Chemistry and Drug Design	1
PHY	601	Human Physiology 1	2
PHY	602	Human Physiology 2	2
PHY	603	Human Physiology 3	2
PHY	611	Advanced Electrophysiology	2

ANAT	605	Human Gross Anatomy	3
MMIM	612	Basic Medical Parasitology and Entomology	3
MMIM	620	Emerging bacterial infectious diseases	3

Master of Public Health

Description

The program is designed to meet the development needs of professionals working in the field of public health or related fields such as occupational health, environmental health, primary care or health promotion. It is appropriate for those working in health and social care organizations, including health authorities, government departments and health service providers such as hospitals and clinics. The course will also be appropriate for those who wish to pursue a career in academic public health or to learn more about epidemiology and statistics for research or health service evaluation. The program is part-time. The program is modular with teaching taking place during intensive courses 0830-1700 Wednesday-Saturday.

Program Objectives

1. History and philosophy of public health as well as its core values, concepts, functions, and leadership roles.
2. Population health concepts, and the processes, approaches, and interventions that identify and address the major health-related needs and concerns of populations.
3. Concepts, methods, and tools of public health data collection, analysis and interpretation, and the evidence-based reasoning and informatics approaches that are essential to public health practice.
4. Biological, environmental, socio-economic, behavioral, cultural, and other factors that impact human health, influence the global and societal burden of disease, and contribute to health disparities.
5. Identification and pursuit of opportunities for promoting health and preventing disease across the lifespan and for enhancing public health preparedness.
6. Characteristics and organizational structures of selected health care systems.
7. Legal, ethical, economic, and regulatory dimensions of health care and public health policy.
8. Public health-specific communication and social marketing, including technical and professional writing.
9. The cultural context of public health issues.
10. Globalization and sustainable development and their relationship to population health.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Use advanced concepts, methods, and tools of public health data collection, analysis and interpretation.
2. Identify and address the major health-related needs and concerns of populations using population health concepts and methods
3. Analyze the biological, environmental, socio-economic, behavioral, cultural, and other factors that impact human health.
4. Use effective communication and strategies for promoting health and preventing disease across the lifespan.
5. Compare the characteristics and organizational structures of health care systems in selected countries.
6. Explain the legal, ethical, economic, and regulatory dimensions of health care and public health policy.

Degree Requirements: Total Credit Hours: 34

Public Health Major

			Course Credits
Required Courses			(Required Credit Hours:18)
CMPH	601	Fundamentals of Public Health	2
CMPH	602	Biostatistics I	2
CMPH	603	Epidemiological Methods	2
CMPH	606	Health Promotion and Disease Prevention	2
CMPH	609	Introduction to Public Health	2
CMPH	614	Public Health Assignments I	2
CMPH	616	Public Health Assignments II	2
CMPH	623	Public Health Assignments III	2
CMPH	629	Skills for Public Health Practice	2

Elective Courses (Not offered every year, Students must select 8 courses out of the list)			(Required Credit Hours:16)
CMPH	604	Health Care Evaluation and Needs Assessment	2
CMPH	605	Public Health Management	2
CMPH	607	Health Protection	2
CMPH	613	Occupational Health	2
CMPH	615	Clinical Epidemiology	2
CMPH	617	Environmental Public Health	2
CMPH	618	Current Issues in Public Health	2
CMPH	620	Maternal and Child Health	2
CMPH	622	Chronic Disease Epidemiology	2
CMPH	627	Advanced Epidemiological Methods	2
CMPH	628	Global Health	2
CMPH	630	Advanced Biostatistics	2
CMPH	633	Advanced Public Health	2
CMPH	631	Advanced Environmental Health	2

Doctor of Pharmacy

Description

The Postgraduate Doctor of Pharmacy is a QFEmirates level 9 professional program (Master's degree) offered to licensed pharmacists with an accredited baccalaureate degree in pharmacy who wish to earn a higher degree relevant to clinical practice. The program is designed and developed to satisfy the needs of practicing pharmacists at health care centers within the country and internationally. The duration of the program is 2 years full time and includes 1,440 hours (36 weeks) of placement in clinical environments. The College of Medicine & Health Sciences has a high global rating and is accredited by the General Medical Council. It is listed and accepted by the World Health Organization (WHO) and the Educational Commission for Foreign Medical Graduates and recognized by American and Canadian Universities and Health Institutions.

Program Objectives

1. Provide Optimal Patient Education and Care
2. Apply Advanced Therapeutic Knowledge to Pharmacy Practice
3. Develop Interpersonal & Communication Skills.
4. Conduct Health-Related Research.
5. Identify and Use the Appropriate Health-Related Resources.
6. Demonstrate Professional Behavior and Ethics with Patients and Other Health Care Providers

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Apply knowledge of advanced pharmacotherapeutics and pharmaceutical sciences in recommending and delivering optimal patient care.
2. Evaluate the medical literature and utilize evidence-based medicine in problem solving and decision-making process.
3. Communicate effectively while displaying empathy with patients and provide drug information to patients and healthcare providers.
4. Design and monitor an individualized pharmaceutical care plan in collaboration with other healthcare providers and take leadership roles in promoting health and wellness in the community.
5. Exhibit a capacity for self-evaluation, moral reflection and ethical reasoning to form the basis for self-directed and lifelong learning.
6. Design, conduct, and analyze advanced clinical research projects.

Degree Requirements: Total Credit Hours: 60

			Course Credits
Year 1			
Fall Semester Required Courses			
			(Required Credit Hours:13)
CMPH	600	Biostatistics & Clinical Research Design	3

PHTX	634	Advanced Clinical Pharmacokinetics	2

			Course Credits

Year 2

Fall Semester Required Courses			
			(Required Credit Hours:16)
PHTX	614	Advanced Pharmacy Practice Experience 2: General Internal Medicine 1	4
PHTX	627	Advanced Pharmacy Practice Experience 3: General Internal Medicine 2	4
PHTX	613	Advanced Pharmacy Practice Experience 4: Ambulatory Care	4
PHTX	618	Advanced Pharmacy Practice Experience 5: Infectious Diseases	4

Spring Semester Required Courses			
			(Required Credit Hours:17)
PHTX	626	Advanced Pharmacy Practice Experience 6: General Surgery	4
PHTX	620	Advanced Pharmacy Practice Experience 7: General Pediatric	4
PHTX	621	Advanced Pharmacy Practice Experience 8: Critical Care Medicine	4
PHTX	616	Advanced Pharmacy Practice Experience 9: Adult Oncology	4
PHTX	633	Research Project 2	1

Doctor of Philosophy in Public Health

Description

The Doctor of Philosophy (PhD) program in Public Health is designed to provide student with sufficient knowledge, research skills and competency in a wide variety of areas that will prepare him/her for a career in public health and epidemiology research, academia and leadership. The program embraces both course work as well as original research work completion. The combination of unique courses will cover several public health topics, epidemiology, bio-statistics, and research methodology. This 54-credit hours PhD program is typically finished in four to six years. The program will intend to contribute to the advancement of the UAE knowledge-based economy through community engagement and knowledge transfer. The program will enhance scientific innovation through research and establish the UAEU as a leader in public health research within the country and region.

Program Objectives

1. Develop scholarly inquiry grounded in research and the reality of practice in the discipline area.
2. Offer a rigorous and innovative discipline-based knowledge that prepares students to succeed in a globally challenging, competitive and changing environment.
3. Enhance professional growth, lifelong learning skills and leadership competencies in the area of specialization for career opportunities in different sectors.
4. Adhere to professional integrity and research ethics, and be committed to values related to the area of specialization.
5. Prepare graduates to be inquisitive, to reason critically, and to communicate clearly and effectively.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Synthesize new knowledge by engaging in original research using advanced concepts and methods of public health data collection, analysis and interpretation.
2. Evaluate major health-related needs, concerns and trends using public health concepts and methods to improve the human health.
3. Analyze, critically, the biological, occupational, environmental, socio-economic, behavioral, cultural, and other determinants that impact human health.
4. Design effective communications, policies and strategies for promoting health and preventing diseases.
5. Evaluate the legal, ethical, economic, and regulatory dimensions of public health.

Degree Requirements: Total Credit Hours: 54

General Requirements

Required Courses			(Required Credit Hours:9)
CMHS	731	Research Proposal Development	1
CMHS	702	Journal Club I	2
CMHS	703	Journal Club II	2
CMHS	704	Journal Club III	2
CMHS	705	Journal Club IV	2

Doctor of Philosophy in Biomedical Sciences

Description

The Doctor of Philosophy (PhD) program in Biomedical Sciences is designed to provide student with sufficient knowledge, research skills and competency in a wide variety of areas that will prepare him/her for a career in Biomedical Sciences research, academia and leadership. The program embraces both course work as well as original research work completion. The combination of unique courses will cover several Biomedical Sciences topics, bio-statistics, and research methodology. This 54-credit hours PhD program is typically finished in four to six years. The program will intend to contribute to the advancement of the UAE knowledge-based economy through community engagement and knowledge transfer. The program will enhance scientific innovation through research and establish the UAEU as a leader in Biomedical Sciences research within the country and region.

Program Objectives

1. Develop scholarly inquiry grounded in research and the reality of practice in the discipline area.
2. Offer a rigorous and innovative discipline-based knowledge that prepares students to succeed in a globally challenging, competitive and changing environment.
3. Enhance professional growth, lifelong learning skills and leadership competencies in the area of specialization for career opportunities in different sectors.
4. Adhere to professional integrity and research ethics, and be committed to values related to the area of specialization.
5. Prepare graduates to be inquisitive, to reason critically, and to communicate clearly and effectively.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Demonstrate depth and breadth of the translational biomedical knowledge used in their scholarly activities.
2. Demonstrate effective communication skills, with peers and colleagues, that are effective in the exchange and translation of knowledge and scientific findings.
3. Synthesize new translational biomedical sciences knowledge by engaging in collaborative research, and in scholarships and through oral, written and publication platforms
4. Demonstrate professionalism and ethical attitudes in data management, ownership and sharing.
5. Evaluate the significance of translational biomedical research.

Doctor of Philosophy in Nutritional Sciences

Description

The PhD Program in Nutritional Sciences aims to give students the opportunity to gain advanced knowledge related to various aspects of nutritional sciences. The program will give an opportunity to the students to conduct high quality research, which will enhance the knowledge of the ways various nutrients, foods and dietary patterns could mitigate the risk of diseases and promote prevention. In addition, the program provides guidance for improving lifestyle and preventing and/or treating diseases through nutrition education and helps gather data for policy makers, to design and implement strategies for improving health of all individuals.

Program Objectives

1. To prepare and create future leaders of excellence in research, industry, and government sectors.
2. To enhance R & D capabilities with advanced skills among the graduates to serve the society.
3. To improve student's competencies in critical thinking, problem solving, leadership, team work and effective communication.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Demonstrate advanced level of knowledge in Nutritional Sciences.
2. Ethically conduct original interdisciplinary research, including development of a relevant methodology, data collection and analysis, interpretation of scientific results and literature, drawing conclusion and recommendations to improve health and well-being at the local, national and international levels.
3. Identify issues to problems in nutritional science by proposing alternative solutions/ideas.
4. Communicate evidence-based nutritional science information using appropriate (written, visual, and oral) means, according to the level of the audiences (professional or general).
5. Demonstrate leadership qualities in the field of nutritional science to contribute to a future successful career in academia, industry or policy- making.

Master of Science in Human Nutrition

Description

The Master of Science in Human Nutrition Program will be a full-time program delivered through a duration of 2 years. The completion time of the program is two years (4 semesters) for full time students and four years (8 semesters) for part-time students. Students can be enrolled in the Program in every Fall semester of the academic year. The first 2 semesters (first academic year) courses will be delivered in the UAEU, on the 3rd semester students will be based in United Kingdom (UK) and courses will be delivered in the University College London (UCL), while the 4th semester students will be back in UAEU to carry on their remaining courses and will also be conducting their thesis research which will be co-supervised by one faculty member from UAEU and another faculty from UCL.

Program Objectives

1. Equip students with advanced knowledge, scientific research and problem-solving skills in human nutrition at the individual, family and community levels.
2. Provide students with comprehensive educational experience to perform outcome-based research, as well as prepare graduates to pursue more advanced degree.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Evaluate the impact of nutrition on health status of individuals and communities.
2. Design nutrition interventions using scientific evidence in improving health and well-being of individuals and communities.
3. Conduct outcome-based research by using ethical guidelines and appropriate research methods of assessments and analysis
4. Demonstrate advanced writing and oral communication skills using the scientific literature

Master of Science in Clinical Psychology

Description

This Masters of Science (MSc) in clinical Psychology Program, Department of Clinical Psychology, is currently offered in Al Ain city (Maqam Campus). The need for qualified clinicians and mental health professionals to serve the community necessitated the establishment of this program. We are proud that our program is the first and the only masters in clinical psychology in the country. The Master of Science program is designed to provide proper training for Masters level psychologists to work in a variety of clinical settings including hospitals, schools, public agencies, and private practice. It also provides a foundation for students interested in pursuing advanced doctoral studies. The program focuses on the field of clinical psychology. The program continued to steadily thrive and increasing attracting more and more national and international students.

The curriculum is structured to enable students pursue a plan of study to assure increased professional competence and breadth of knowledge in the field of clinical psychology. This program requires 39 semester hours of study, including two internship courses (600 clock hours) of supervised practicum experience in an approved mental health or rehabilitation setting. Students also have the opportunity to curry out research in clinical psychology and write a thesis and defend it. All degree courses and the thesis are in English.

Program Objectives

1. To provide students with advanced knowledge of current developments in clinical psychology.
2. To train students on the application of clinical knowledge to solve psychological problems.
3. To train students to act independently in planning and implementing tasks at a professional level.
4. To enable students to communicate clinical issues and conclusions clearly to all parties involved.
5. To provide students with knowledge that enables them to conduct clinical research under minimal supervision.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Demonstrate clinical knowledge that is culturally sound and relevant to professional and ethical practices in the field of mental health.
2. Conduct proper psychological assessment.
3. Diagnose successfully clients' clinical problems using DSM/ ICD.
4. Create suitable treatment plans for diverse psychological disorders.
5. Apply therapeutic skills to help clients (individuals and groups) overcome their psychological disorders.
6. Communicate comprehensive and understandable psychological reports to all parties involved.
7. Apply appropriate methodology to conduct research in clinical psychology.

Degree Requirements: Total Credit Hours: 39

			Course Credits

PSY	633	Scientific and Professional Ethics	2
PSY	634	Internship II	2
Elective Courses (CH:6)			
Students should select two courses from the list below			
(Required Credit Hours:6)			
PSY	522	Cross Cultural Issues	3
PSY	628	Master's Thesis	3
PSY	621	Research Design and Methods	3
PSY	622	Seminar in Mental Health	3
PSY	623	Neuropsychology	3
PSY	624	Personality Perfomance-based Measures	3
PSY	626	Psychopharmacology	3
			Course Credits
Bridge Courses			
These two courses will be limited to students with insufficient background in mental health and psychological assessment. And should be taken with the approval of the program coordinator.			
			(Required Credit Hours:6)
PSY	509	Introduction to Mental Health	3
PSY	510	Foundation of psychological Assessment	3

College of Science

Department of Biology

Master of Science in Environmental Sciences and Sustainability

Description

The M.Sc. in Environmental Sciences is a 30 credit hour program that is offered both full and part time within the Biology Department. Students are required to complete 24 credit hours of coursework in addition to 6 credit hours assigned to research and a completion of a M.Sc. thesis. The coursework includes 4 credit hours of College of Science requirements (Ethics, Research Methods and Statistics), 10 credit hours of core environmental sciences courses and elective courses (10 credit hours) that allow the student to specialize in any specific topic relating to environmental sciences. Student progress is overseen by a research supervisor (and co-supervisors) and a thesis defense committee. The program is a fee-based program open for all students who meet the entry requirements.

Program Objectives

1. Develop proficiency of basic concepts in cellular and molecular biology, ecology and environmental sciences, and general biology.
2. Foster teamwork and improve oral and communication skills.
3. Foster a student-oriented research program that results in professional publications.
4. Embrace student-oriented teaching methods that nurture critical thinking abilities and apply their knowledge to solve theoretical and empirical real-life problems.
5. Prepare students for future job market and careers.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Discuss contemporary issues relating to environmental challenges, ethics, and professional responsibilities.
2. Describe relationships between environmental components and processes and the role of anthropogenic factors.
3. Evaluate material from available resources on issues and challenges relating to environmental problems facing the UAE.
4. Evaluate the means by which human society can conserve and restore the environment using approaches drawn from various sciences and fields of study.
5. Demonstrate strong written and oral presentation skills.
6. Conduct scientific environmental research, and use quantitative methods to analyze results.

Master of Science in Molecular Biology and Biotechnology

Description

The M.Sc. in Molecular Biology and Biotechnology is 30 credit hours that is offered both full- and part-time within the Department of Biology. Students are required to complete 24 credit hours of coursework in addition to 6 credit hours assigned to research and a completion of a M.Sc. thesis. The coursework includes 2 credit hours of College of Science requirements (Ethics, Research Methods), 12 credit hours of 4 core Molecular Biology and Biotechnology courses in addition to 10 credit hours of intercollege (College of Science and College of Medicine and Health Sciences) elective courses that allows the student to specialize in any specific topic related to Molecular Biology and/or Biotechnology. Students can take up to 6 credit hours of elective courses offered by the CMHS. Student progress is overseen by a research supervisor (and co-supervisors) and a thesis defense committee. The program is a fee-based program open for all students who meet the entry requirements.

Program Objectives

1. Develop proficiency of basic concepts in cellular and molecular biology, ecology and environmental sciences, and general biology.
2. Foster teamwork and improve oral and communication skills.
3. Foster a student-oriented research program that results in professional publications.
4. Embrace student-oriented teaching methods that nurture critical thinking abilities and apply their knowledge to solve theoretical and empirical real-life problems.
5. Prepare students for future job market and careers.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Demonstrate leading edge knowledge in a chosen specialized area of molecular biology and/or biotechnology
2. Gain insight into the most significant and recent biotechnology and molecular-based methods used to expand the understanding of biology.
3. Manage and analyze data stored in databases, familiarize with various bioinformatics analysis tools available to analyze biological data.
4. Conduct scientific molecular biology and/or biotechnology research, and use quantitative methods to analyze results
5. Evaluate methods and results within the field of specialization critically and ethically.
6. Work independently or in a team on complex project that requires multidisciplinary collaboration
7. Communicate scientific results to both experts and general audience through writing structured reports and contributions for scientific publications and posters, and by oral presentations.

Doctor of Philosophy in Cellular and Molecular Biology

Description

The awarded degree, in recognition of the completion of the requirements of this program, is "Doctor in Cellular and Molecular Biology". The study plan for the Ph.D. Program shall consist of a total of 54 credit hours. The Ph.D. students must complete all degree requirements in a minimum of six (6) and a maximum of twelve (12) semesters after matriculation. The Program includes 6 credit hours of College of Science (COS) mandatory courses, 9 credit hours of Program compulsory courses, 6 CH credit hours of Program electives and 30 credit hours for Thesis. The PhD in Cellular and Molecular Biology is a full-time and English based program. Applicants must have successfully completed a Master degree or equivalent in Biology or related filed, with associated cumulative GPA of 3.3 or more (on scale of 4) and should provide a proof of proficiency in English. IELTS of less than two years with a minimum score of 6 is required. TOEFL is also accepted.

Program Objectives

1. Develop scholarly inquiry grounded in research and the reality of practice in the sciences.
2. Offer a rigorous and innovative discipline-based knowledge that prepares students to succeed in a globally challenging, competitive and changing environment.
3. Enhance professional growth, lifelong learning skills and leadership competencies in the area of specialization for career opportunities in relation with Science.
4. Adhere to professional integrity and research ethics, and be committed to values related to the area of specialization.
5. Prepare graduates to be inquisitive, to reason critically, and to communicate clearly and effectively.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Retrieve and Apply advanced knowledge to solve problems in Cellular and Molecular Biology.
2. Perform independently an original work of advanced research on a topic in Cellular and Molecular Biology.
3. Analyze quantitatively and critically open problems in Cellular and Molecular Biology.
4. Communicate effectively Cellular and Molecular Biology finding to a specialized audience as well as the general public.
5. Articulate strategies to tackle identified ethical and safety issues that may arise in the field.
6. Supervise effectively group efforts to achieve specific tasks.

Doctor of Philosophy in Ecology and Environmental Sciences

Description

Our Ph.D. program in Ecology and Environmental Sciences (EES) equips students with skills and training in the basic and applied sciences with the objectives of improving society's understanding of environmental problems and helping manage, mitigate, and avoid those problems. The program in environmental science is a rigorous, interdisciplinary course of study. The overall objectives of the program are: (1) to clarify and improve understanding of environmental problems and to identify solutions to these problems; and (2) to foster collaborative, interdisciplinary research amongst scientists from various disciplines. This Ph.D. Program in in Ecology and Environmental Sciences consists of a total of 54 credit hours. The Ph.D. students must complete all degree requirements in a minimum of six (6) and a maximum of twelve (12) semesters. The Program includes 6 credit hours of College of Science (COS) mandatory courses, 9 credit hours specialization core courses, 9 credit hours EES electives and 30 credit hours for Thesis. The mode of study is on a full-time basis. Applicants must have successfully completed a Master degree or equivalent in Biology or related subjects, with associated cumulative GPA of 3.3 or more (on scale of 4). All degree courses and written thesis must be prepared in the English language. Therefore, a minimum IELTS requirements of 6.5, achieved not more than two years prior to enrollment in the Ph.D. program, is mandatory.

Program Objectives

1. Develop scholarly inquiry grounded in research and the reality of practice in the sciences.
2. Offer a rigorous and innovative discipline-based knowledge that prepares students to succeed in a globally challenging, competitive and changing environment.
3. Enhance professional growth, lifelong learning skills and leadership competencies in the area of specialization for career opportunities in relation with Science.
4. Adhere to professional integrity and research ethics, and be committed to values related to the area of specialization.
5. Prepare graduates to be inquisitive, to reason critically, and to communicate clearly and effectively.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Retrieve and Apply advanced knowledge to solve problems in Ecology and Environmental Sciences.
2. Perform independently an original work of advanced research on a topic in Ecology and Environmental Sciences.
3. Analyze quantitatively and critically open problems in Ecology and Environmental Sciences.
4. Communicate effectively Ecology and Environmental Sciences finding to a specialized audience as well as the general public.
5. Articulate strategies to tackle identified ethical and safety issues that may arise in the field.
6. Supervise effectively group efforts to achieve specific tasks.

Department of Chemistry

Master of Science in Chemistry

Description

The M.Sc. in Chemistry is a 30 CH's program that is offered both full and part time within the Department of Chemistry. Students are required to complete 24 credit hours of coursework in addition to 6 credit hours assigned to research and a completion of a M.Sc. thesis. In addition to 2 CH of college requirements, the coursework includes 5 compulsory courses in chemistry, namely 2 supportive courses (4 CH) and 3 core chemistry courses (9 CH), and 3 elective courses (9 CH), that allow the student to specialize in any specific topic related chemistry. Student progress is overseen by a research supervisor (and co-supervisors) and a thesis defense committee. The program is a fee-based program open for all students who meet the entry requirements.

Program Objectives

1. To provide students with in-depth knowledge of advanced topics in their chosen sub-discipline of chemistry.
2. To graduate students with the skills necessary to carry out independent research.
3. To develop students' communication and team-work skills.
4. To produce graduates who are well prepared for the workplace or further studies (Ph.D.) in chemistry.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Solve complex problems in chemical applications.
2. Use modern methods to carry out research and solve real life problems.
3. Properly document and present the results of research work.
4. Work effectively in teams and manage group tasks.
5. Apply appropriate ethical standards to issues related to science, research, and work.
6. Critically evaluate new information in the field of chemistry

Doctor of Philosophy in Chemistry

Description

The awarded degree, in recognition of the completion of the requirements of this program, is "Doctor of Philosophy in Chemistry". The study plan for the Ph.D. Program in Chemistry shall consist of a total of at least 54 credit hours. The Ph.D. students must complete all degree requirements in a minimum of six (6) and a maximum of twelve (12) semesters after matriculation. The Program includes 6 credit hours of College of Science (COS) mandatory courses, 18 credit hours (divided as: 9 credit hours of compulsory courses, and 9 credit hours from a basket of elective courses of the Chemistry PhD program), and 30 credit hours for Thesis. The mode of study is on a full-time basis. Applicants must have successfully completed a Master degree or equivalent in Chemistry, with associated cumulative GPA of 3.3 or more (on scale of 4). All degree courses and written thesis are in English, leading to minimum IELTS requirements of 6.5, achieved not more than two years prior to enrollment in the Chemistry Ph.D. program. Other documentation may be recommended as described below.

Program Objectives

1. Develop scholarly inquiry grounded in research and the reality of practice in the sciences.
2. Offer a rigorous and innovative discipline-based knowledge that prepares students to succeed in a globally challenging, competitive and changing environment.
3. Enhance professional growth, lifelong learning skills and leadership competencies in the area of specialization for career opportunities in relation with Science.
4. Adhere to professional integrity and research ethics, and be committed to values related to the area of specialization.
5. Prepare graduates to be inquisitive, to reason critically, and to communicate clearly and effectively.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Retrieve and Apply advanced knowledge to solve problems in the chemical sciences.
2. Perform independently an original work of advanced research on a topic in chemistry.PLO3: Analyze quantitatively and critically open problems in chemistry.
3. Analyze quantitatively and critically open problems in chemistry.
4. Communicate effectively the major tenets in the field of chemistry and their own work orally and in writing.
5. Articulate strategies to tackle identified ethical and safety issues that may arise in the field.
6. Supervise effectively group efforts to achieve specific tasks.

Department of Geosciences

Master of Science in Geosciences

Description

The proposed Master of Science (M.Sc.) in Geosciences is a coursework-plus-thesis based degree providing postgraduate education in advanced topics in a broad range of Geoscience disciplines. The outcomes of this degree encompass both progression towards PhD in Geosciences (available at the UAEU) and more specialized education for employment in a range of private and public enterprises, particularly resource industries and environmental authorities. Thus, the program is oriented towards the following goals: 1) academic (students preferring to progress to Ph.D. degree), 2) private professional (students intending to seek employment in private industries and consultancies), 3) public service (students intending to follow careers in government ministries, municipalities and other public service authorities), 4) education (secondary school student teachers who are intending to specialize in geology). The mode of study may be full-time or part-time. Applicants must have successfully completed a B.Sc. in Geology or equivalent, with associated cumulative GPA of 3.0 or more (on scale of 4). All degree courses and written thesis are in English, leading to minimum TOEFL or IELTS requirements. The requirements of the course are 30 credit hours (CH) of study including 6 CH for College core courses, 9 CH for Geoscience core courses, 9 CH for Geoscience elective courses including a maximum of 3 CH from other master approved courses, and 6 CH for thesis. Oral defense of thesis is compulsory.

Program Objectives

1. Expanding research activity and research-oriented education in the UAEU.
2. Delivering specialized geoscientists who can serve the UAE and the GCC region.
3. Preparing geoscientists who can progress to a PhD program in the UAE or internationally.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Develop advance competences in field, laboratory, and data analysis techniques related to the research project discipline.
2. Search and review previous studies in research project disciplines.
3. Apply independent self-management and working in a team capacity.
4. Communicate professionally in writing and presentation of scientific results.
5. Solve geoscience problems related to industrial, environmental, and scientific projects using the acquired comprehensive knowledge and skills.

Department of Mathematical Sciences

Master of Science in Mathematics

Description

The M.Sc. in Mathematics is a 30 CH's program that is offered both full and part time within the Department of Mathematical Sciences. Students are required to complete 24 credit hours of coursework in addition to 6 credit hours assigned to research and a completion of a M.Sc. thesis. In addition to 2 CH of college requirements, the coursework includes 3 core mathematics courses and Seminar (10 CH), 4 elective courses (12 CH), that allow the student to specialize in any specific topic related to pure or applied mathematics. Student progress is overseen by a research supervisor (and co-supervisors) and a thesis defense committee. The program is a fee-based program open for all students who meet the entry requirements.

Program Objectives

1. To provide students with a comprehensive advanced knowledge of the main areas of mathematics;
2. To provide students with the necessary background for further studies in Mathematics, and enhance their research capabilities;
3. To produce graduates with high level of analytic and numerical skills;
4. To train students to communicate effectively both orally and in writing;

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Discuss in depth concepts, techniques, and results related to active research in Mathematics.
2. Solve mathematical problems using theoretical tools and/or modeling.
3. Develop mathematical proofs completely and rigorously.
4. Produce a comprehensive independent work, including a literature review.
5. Contribute actively to research projects in mathematics, using an adequate methodology.
6. Communicate effectively mathematical results to a specialized audience.
7. Demonstrate awareness of ethical issues related to science, research, and work.

Doctor of Philosophy in Mathematics

Description

The awarded degree, in recognition of the completion of the requirements of this program, is "Doctor of Philosophy in Mathematics". The study plan for the Ph.D. Program in Mathematics shall consist of a total of 54 credit hours. The Ph.D. students must complete all degree requirements in a minimum of six (6) and a maximum of twelve (12) semesters after matriculation. The Program includes 6 credit hours of College of Science (COS) mandatory courses, 9 credit hours Mathematics core courses, 9 credit hours physics electives and 30 credit hours for Thesis. The mode of study is on a full-time basis. Applicants must have successfully completed a Master degree or equivalent in physics or related subjects, with associated cumulative GPA of 3.3 or more (on scale of 4). All degree courses and written thesis are in English, leading to minimum IELTS requirements of 6.5, achieved not more than two years prior to enrollment in the Ph.D. program.

Program Objectives

1. Develop scholarly inquiry grounded in research and the reality of practice in the sciences.
2. Offer a rigorous and innovative discipline-based knowledge that prepares students to succeed in a globally challenging, competitive and changing environment.
3. Enhance professional growth, lifelong learning skills and leadership competencies in the area of specialization for career opportunities in relation with Science.
4. Adhere to professional integrity and research ethics, and be committed to values related to the area of specialization.
5. Prepare graduates to be inquisitive, to reason critically, and to communicate clearly and effectively.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Retrieve and Apply advanced knowledge to solve problems in Mathematics.
2. Perform independently an original work of advanced research on a topic in athematic.
3. Analyze quantitatively and critically open problems in athematic.
4. Communicate effectively physics finding to a specialized audience as well as the general public.
5. Articulate strategies to tackle identified ethical and safety issues that may arise in the field.
6. Supervise effectively group efforts to achieve specific tasks.

Department of Physics

Master of Science in Physics

Description

The M.Sc. in Physics is a 30 CH's program that is offered both full- and part-time within the Department of Physics. Students are required to complete 24 credit hours of coursework in addition to 6 credit hours assigned to research and a completion of an M.Sc. thesis. In addition to 2 CH of college requirements, the coursework includes 13 CH core courses, and 9 CH elective courses, that allows the student to specialize in any specific topic related to Physics. Student progress is overseen by a research supervisor (and co-supervisors) and a thesis defense committee. The program is a fee-based program open for all students who meet the admission requirements.

Program Objectives

1. A robust background in concepts and solving skills in Physics.
2. The capability to research a topic in contemporary Physics.
3. The capability to communicate findings.
4. Autonomy in taking informed, responsible, and ethically sound decisions regarding life-long Learning and professional development.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Demonstrate mastery of advanced topics in Physics and related disciplinary skills.
2. Evaluate and solve complex real-world scientific problems both systematically and creatively.
3. Demonstrate advanced oral and written communication skills individually and collectively.
4. Execute ethically project work or research that contributes significantly to the physics discipline.

PHYS	525	Quantum Physics I	3
PHYS	530	Electrodynamics I	3

PHYS	545	Analytical Mechanics	3
PHYS	633	Physics Seminar	1

Course Credits

Elective Courses

Elective Courses can be chosen from the following list, with the option for student to choose up to 3CH from other UAEU graduate programs, after approval of the Graduate Committee.

(Required Credit Hours:9)

PHYS	541	Atomic Physics	3
PHYS	543	Laser Physics	3
PHYS	552	Nuclear Physics	3
PHYS	555	Introduction to Plasma Physics	3
PHYS	560	Elementary Particle Physics	3
PHYS	575	Physics of Semiconductors	3
PHYS	614	Modern Statistical Physics	3
PHYS	622	Solid-State Physics I	3
PHYS	624	Computational Physics-I	3
PHYS	698	Selected Topics I	3

Doctor of Philosophy in Physics

Description

The awarded degree, in recognition of the completion of the requirements of this program, is "Doctor of Philosophy in Physics". The study plan for the Ph.D. Program in Physics shall consist of a total of 54 credit hours. The Ph.D. students must complete all degree requirements in a minimum of six (6) and a maximum of twelve (12) semesters after matriculation. The Program includes 6 credit hours of College of Science (COS) mandatory courses, 9 credit hours physics core courses, 9 credit hours physics electives and 30 credit hours for Thesis. The mode of study is on a full-time basis. Applicants must have successfully completed a Master degree or equivalent in physics or related subjects, with associated cumulative GPA of 3.3 or more (on scale of 4). All degree courses and written thesis are in English, leading to minimum IELTS requirements of 6.5, achieved not more than two years prior to enrollment in the Ph.D. program.

Program Objectives

1. Develop scholarly inquiry grounded in research and the reality of practice in the sciences.
2. Offer a rigorous and innovative discipline-based knowledge that prepares students to succeed in a globally challenging, competitive and changing environment.
3. Enhance professional growth, lifelong learning skills and leadership competencies in the area of specialization for career opportunities in relation with Science.
4. Adhere to professional integrity and research ethics, and be committed to values related to the area of specialization.
5. Prepare graduates to be inquisitive, to reason critically, and to communicate clearly and effectively.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Retrieve and Apply advanced knowledge to solve problems in physics.
2. Perform independently an original work of advanced research on a topic in physics.
3. Analyze quantitatively and critically open problems in Physics.
4. Communicate effectively physics finding to a specialized audience as well as the general public.
5. Articulate strategies to tackle identified ethical and safety issues that may arise in the field.
6. Supervise effectively group efforts to achieve specific tasks.

Master of Science in Space Science

Description

The primary objective of the interdisciplinary Space Science MSc Program, offered in collaboration by the College of Science (COS), College of Engineering (COE), College of Humanities & Social Science (CHSS) and College of IT (CIT) at UAEU, with the support of National Space Science and Technology Center (NSSTC), is to serve as a thorough and effective academic exposure of Space Sciences and Technology for students aspiring to build careers in the space sector. Students as well as working professionals with a science or technology background and a passion for space science are invited to enrol in this interdisciplinary Space Science MSc program, which is offered as a full time program, featuring classroom lectures, labs, hands-on training, requiring students to complete 30 CH (including MSc thesis). It also includes a compulsory internship experience at space research institutes in the UAE. It has been conceived and designed to comprise course content covering various space-related disciplines to give students an extensive exposure to the broader domain of space science, allowing them to pursue their careers in space-related areas. The emphasis will be on science related themes (e.g. Space Physics, Planetary Sciences, Astronomy, Planetary Atmospheres etc.) but the program will also feature a technology component (Spacecraft Systems, GIS, Remote Sensing, Space Instrumentation etc.) to impart necessary knowledge of the tools, techniques and applications used to conduct space research.

Program Objectives

1. Serve the life-long learning needs of the UAE's space science sector and develop the graduate students' attitude to acquire further learning experiences and motivate them to get engaged in Ph.D. or advanced training programs.
2. Provide efficient and productive educational environment to carry out fundamental and applied research to deal with national and international space science challenges.
3. Strengthen the collaboration between UAE University and the national, regional and international stakeholders in the space sector.
4. Enrich the community and industry with quality technical assistance and highly qualified national manpower to lead the national space development plans.

Program Learning Outcomes

Upon successful completion of this program, students will be able to:

1. Develop thorough understanding and professional skills by making use of appropriate literature and research resources.
2. Evaluate complex inter-disciplinary challenges to be resolved through space science and technology.
3. Formulate and carry forward space science research and development by applying scientific principles in Space Sciences.
4. Create innovative Space Systems solution through mission-specific projects.
5. Compose scientific results in the form of research publications, presentations, thesis and reports.
6. Design solutions to multi-faceted space science problems both systematically and analytically as part of a diverse team.

Degree Requirements: Total Credit Hours: 30

			Course Credits
MSc Space Science Core Courses			
These courses form the core of the MSc Space Science Program.			
			(Required Credit Hours:18)
AERO	601	Spacecraft Systems	3
AERO	602	Spacecraft Dynamics and Attitude Control	3
PHYS	505	Space Physics	3
PHYS	506	Astronomy & Astrophysics	3
GEOG	650	Remote Sensing of Terrestrial and Planetary Surfaces	3
RGIS	603	Digital Image Processing in RS	3
			Course Credits
MSc Space Science Elective Courses			
Student should take two of these courses form the elective basket for the MSc Space Science Program.			
			(Required Credit Hours:6)
PHYS	606	Space Science Instrumentation	3
PHYS	698	Selected Topics I	3
GEOG	660	GIS for Planetary Surfaces	3
GEOG	670	Planetary Atmospheres	3
GEOL	671	Planetary Sciences	3
ISBP	669	Computation and Data Science	3
			Course Credits
MSc Thesis			
Compulsory MSc Research Thesis in a theme related to Space Science.			
			(Required Credit Hours:6)
COSR	699	Thesis	6
			Course Credits
Internship			
Mandatory internship at one of the space-related organizations.			
			(Required Credit Hours:0)
PHYS	650	Space Science Internship	0
