

SmartBoard Connectivity

The introduction of the iPad in UAEU classrooms has fundamentally changed a teacher's ability to enhance the student's learning environment. Also, the iPad with its true mobility has made the paperless classroom practical with its functionality and versatility. This has had the effect of having to rethink course content, course presentation, testing, communications, and activities.

Technology has provided teachers with more tools than ever before to support a rich and personalized learning experience. Through a technology called Airplay, faculty member can connect their iPads wirelessly and stream any content to the classroom projection system. AirPlay allows Faculty member the freedom to move among the students while controlling all aspects of their presentation. Teachers are no longer trapped at the front of the classroom in order to share content with students. Students can also use it to share their work with their peers.

Connecting to Airplay on an iPad

- Before you attempt to mirror your iPad's screen, you need to first ensure that your iPad, and the AirPlay device you are connecting to (Smart Board -MPA) are on the same WiFi network.
