

Note:

Links created by using Get a link are not discoverable by search, so only people who receive a link from someone else can use it.

You can remove no sign-in required links at any time in the Share dialog box mentioned in the steps above. The REMOVE link is right next to the Copy button.

Introducing Microsoft Flow

Microsoft Flow is a product that helps you set up automated workflows between your favorite apps and services like “synchronize files”, “get notifications”, “collect data”, and more.

The first step is to sign into Outlook on the web with your UAEU account & select Flow from the Applet. You can create your flow from a template or design your own. Templetles are designed for a specific purpose such as notifying you through email when someone modifies a file you shared or backing up your files. These templates are just the tip of the iceberg and are intended to inspire you to create flows that are customized to the exact processes that you need.

Below are some examples of flow templates

Automate your business processes

Multistep flows

Turn repetitive tasks into multistep workflows. For example, with a few clicks capture tweets and add them as leads in Dynamics 365, subscribers in Mailchimp, and more...
