Robo-teachers can aid autistic children in the UAE

Robo-teachers are proving a hi-tech tool to boost the attention levels of autistic children, researchers at a UAE university have found. Academics at the UAEU College of Information Technology in Al Ain have discovered that harnessing artificial intelligence (AI) can aid development as children "pay more attention to a robot" than a human. Researchers found that children on the autism spectrum responded better to simple instructions offered by robots, but their learning was often "inhibited" when presented with more complex ideas by a human face.
