

"During 'Moral Education' initiative:
His Excellency Dr. Ali
Rashid Nuaimi: The UAE
people are the pride of
the country and Zayed's
sons are distinguished by
their morals and not just
their names..

The College of Education, in collaboration with Basmat Najah Club, at the United Arab Emirates University, organized the 'Moral Education' initiative, in the presence of Major-General Pilot Sheikh Ahmed bin Tahnoun Al Nahyan, Chairman of the National and Reserve Service Authority of the Armed Forces, His Excellency Dr. Ali Rashid Nuaimi, Chancellor of the United Arab Emirates University, and a number of deputies, deans, faculty members, and students of the University and schools in the State, in order to enhance the concept of moral education and its importance for parents and students.

Major-General Pilot Sheikh Ahmed bin Tahnoun Al Nahyan gave a detailed presentation on the role of national service in promoting patriotism, touching on several topics, such as patriotism as a fundamental pillar of the moral system, explaining that the martyrs are "the pride of the nation". He stressed that the UAE society is full of inherent ethics, principles, and values that direct the behaviors of society.

For graduation:
College of Engineering at United Arab Emirates University discusses 69 projects in industry ..

The College of Engineering students at United Arab Emirates University presented 69 graduation projects for 294 male and female college students, within the integrative design course. The course is taught over two semesters, with 6 credit hours in the last year of the academic program at the College.

Dr. Hamad Al Jassmi, Head of the Graduation Projects unit said: "The course is designed for students to deal with a different vision of industrial problems, to find new opportunities to solve them. It's also a good opportunity to attract students of the College of Engineering in institutions dealing with the industry, through their work on their projects". He added that "The course gives students real experience in design, by making use of the basic information acquired during the years of study to make modern products, or to produce new equipment or upgrade existing operations."

New System To Offer Full Health Profile Of Driving License Applicants ..

Assessing the health of driving license applicants has traditionally involved an eye test and little else. However, a project underway at UAEU is set to make the process more comprehensive.

In a bid to offer a more thorough assessment of a driving license applicant's health, a team from UAEU is developing a new health screening system to assess an applicant's full health profile before a driving license is issued.

The IDHS3 system, also referred to as an Integrated Driver's Health and Safety Screening System for Traffic and Licensing Authorities.

Editorial

In the New Year, we renew our ambitions, work, and perseverance for more achievements with every step we take, and we renew our allegiance to this country, which has celebrated 45 years of achievements and success. Once we recall the past, we feel that we are blessed to belong to this precious land whose contribution is limitless and unconditional.

We in the Media and Communications Department renew our keenness every year to transmit your achievements and the fruits of your efforts, and you prove to us, day after day that you have no difficulty in effective communication. We wish you a new year full of realized dreams at the first national university.

Congratulations on the New Year 2017

2017.. is the year of achieving aspirations
A year has passed.. the nation's journey
continues

We live in a time of accomplishments, accomplishments not linked to a particular year. We start a new year, a year full of ambition, work and pride for the inhabitants of the giving land, unrestricted by time and place.

His Excellency Ali Rashid Al Noaimi
Chancellor of United Arab Emirates University

With the beginning of each year, we place in our minds new aspirations and we are armed with new energy for work, to give and continue excellence in higher education at all levels, and to continue the process of building future leaders.

His Excellency Dr. Mohamed Albaili
Vice Chancellor of United Arab Emirates
University

Every year we renew our commitment to participate in the march to support and develop our dear nation in all fields of national strategic importance, and to contribute to research solutions for the good of mankind, and, for the United Arab Emirates University, to reach excellence at the international level.

Dr. Ghaleb Al Hadrami
Deputy Vice Chancellor for Research
and Graduate Studies

I am happy on the occasion of the New Year to offer my sincere greetings and wish continued progress and prosperity for our beloved State under our wise leadership, which has spared no effort in pleasing all who reside on its soil by providing all means for prosperity and decent living.

Dr. Mohammed Hassan Dean
of the College of Law

The New Year means hope of a new future and a life filled with work to achieve goals and aspirations, because success is born out of work, accomplishment, and high spirits. I hereby call on the University's family members to take advantage of the possibilities available to them in creativity, innovation and excellence in scientific research.

Dr. Ahmed Murad
Dean of the College of Science

A year has passed and a new year has arrived. We are under a leadership that provides us with prosperity. We are thankful to them and for the new opportunities we have in front of us. We are grateful for the chances we have to renew our enthusiasm to serve our homeland.

I wish you all a great year full of progress, achievement and happiness.

Dr. Shamma Alfalasi
Head of Community Service

We in the Admissions Department are looking forward to our University students' creativity and excellence so that they may join the elite group of alumni who have reached the highest positions locally and globally. Here is their chance to shine in the sky of science and knowledge. With best wishes to everyone for a rich and fruitful college experience in the New Year.

Professor Amnah Al Balushi
Director of Admissions Department

The Information Technology Sector meets with its staff to develop proposals for 'Happiness'..

The Information Technology Sector convened a meeting of its staff to develop initiatives on happiness, with the aim of providing a happy and harmonious working environment within the Sector. The Sector's Happiness Committee will work on learning about the views and suggestions of the staff,

to ensure a happy and supportive work environment, in turn, building teamwork among employees. The Committee seeks constant communication with employees to convert ideas and proposals into practice, and to organize initiatives based on their suggestions.

College of Science launches 'Happy College' to stimulate creativity..

The College of Science at United Arab Emirates University launched the 'Happy College' program. The program aims to create a happy and stimulating work environment for creativity and innovation in the college.

Dr. Ahmad Murad, Dean of the College of Science said during the launch of the program that a

'Happiness and Positivity Council' will be established. This is designed for students and College staff to find a source of happiness and positivity, along with the 'Social Gathering' initiative, in which the Dean will meet with staff and students unofficially to listen to them, discuss, motivate them, and produce creative ideas.

No barriers to creativity at UAEU

Khalid Al Bloushi: students are a fertile environment to be exploited correctly to extract their potential

The Geological Society of Emirates currently focuses on student activities and applications, and involves students in international competitions and exploratory camps, to develop their abilities including creative and leadership skills.

The Head of the Department of Geology at United Arab Emirates University Dr. Khalid Al Bloushi sees that the University students are a "fertile land", which the teacher must tap into and develop, especially as some of the scientific research carried out by teachers is inspired by creative students' questions.

Dr. Khalid Al Bloushi explained that the Department of Geology at the University is keen to build a qualified scientific staff armed with advanced knowledge of science and technology in all areas, consistent with the programs and ambitions of the State, and to strengthen the role of UAEU in preparing a generation of students capable of excellence.

Dr. Al Bloushi pointed out that the department is currently working to cancel student clubs, such as the Geology Club, and all fixed events carried out by the teacher, and to begin opening the door to share creative and innovative ideas from everyone, especially students, to reorient them and give them the opportunity to be great directors and coordinators for the events, rather than just assistants. Students should be free to be creative in the areas they love.

Dr. Al Bloushi said "The world is now moving towards preparing the third-year student to be as professional as an employee before he graduates", stressing

that the study environment in UAEU is prepared for new generations free from obstacles. It is an encouraging environment and an incubator for creativity and innovation in all areas, and one in which creative ideas are applied from the research area.

The following is the interview

What projects you are working on right now?

Recently we are working on tracking the scope of fractions at Dibba, which is an important local seismic source, one which controls the movement of groundwater and which represents 30% of the fresh water in the world. There have been signs in the last ten years that encourage us to work more on this research, and intensify scientific research trips to the region.

We are also in the process of searching for the ruins that appeared in the city of Dubai, conducting a geophysical survey of the area to solve the mystery of the ruins found under the sand, and considering the possibility of a coast in this sandy region, in cooperation with Dubai Municipality.

What are the local and international conferences you have participated in and benefited from?

My involvement in the founding of

the first International Conference on Engineering Geophysics between UAEU and Al Ain Municipality increased my scientific and organizational knowledge of international conferences and now we are preparing for the fourth session of the Conference. I was fortunate to have chaired one of its sessions, and was within the Scientific Committee in a number of them. The conference was highly rated. I recently took part in the GEO 2016 Conference in the Kingdom of Bahrain, where I participated in the Scientific Committee. The experience of participation in such conferences is a source of increasing geological expertise, particularly this conference, which was attended by over 5000 people.

What about scientific and exploratory trips by students?

If there were no practical application of study, the information would be mere fantasies, so we make sure that our main laboratory is the outside environment. There are a lot of things in the UAE worth studying, and I have seen a clear change in the level of experience of students after these trips, where they have been inspired to implement scientific research outside their specialties.
